**THE ENVIRONMENT OF AUTOMATED TRAINING
WITH THE PROPERTIES OF ADAPTATION
BASED ON THE COGNITIVE MODELS**

The specialty 05.13.01 – “The system analysis, control and information
processing” (technical sciences)

THE DISSERTATION

on the competition of scientific degree
of the candidate of technical sciences

English language

The scientific supervisor:
doctor of physical-mathematical sciences, professor
Kvitko Alexander Nikolaevich

Saint-Petersburg city
2020

The table of contents

Introduction	5
1. The condition of the problem of creation of the adaptive intellectual environments of training.	6
1.1. The relevance of creation of the adaptive intellectual means and environments of automated training	7
1.2. The analysis of the condition of problem and the existing contradictions.	8
1.3. The degree of readiness of the problem of creation of the adaptive intellectual technologies and means of training.....	12
1.4. The purpose and the tasks of creation of the adaptive information-educational environment of the automated training system based on the cognitive models	15
1.5. The stages of creation and the analysis of the environment of automated training based on the cognitive models	17
1.6. The list of received scientific results.....	23
2. The analysis of information technologies and the theoretical bases of creation of the information-educational environments and the automated means of training .	27
2.1. The modern standards in the field of quality of the information-educational environment ..	28
2.2. The priority aspects and the directions of informatization	30
2.3. The basic principles of automated training.....	31
2.4. The stages of development of the automated means and environments of training .	34
2.5. The features of organization of the information-educational environment of the automated training at distance	35
2.5.1. The distinctive features of the information-educational environment of the automated training system	38
2.5.2. The subjects of the information-educational environment of the automated training	45
2.5.3. Components, means and technologies in the basis of the information-educational environment of the automated training	49
2.5.4. The models and the technologies of organization of interaction of the subjects and the automated means of training	56
2.6. The comparative characteristic of opportunities of the automated training systems	57
2.7. The main parameters of estimation of the modern means of training and the development of their functional opportunities.....	58
2.8. The features of information interaction of the subjects and means of training in the automated educational environment.....	63
2.9. The factors influencing on the efficiency of the formation of knowledge of trainees in the automated educational environment.....	67
2.10. The influence of components of the automated training system on the health of consumers.....	68

3. The environment of automated training with the properties of adaptation based on the cognitive models.....	71
3.1. The essence of approach to the complex solution of the problem and the statement of research tasks	72
3.2. The modifications in the organization of the information-educational environment for the realization of accounting of the individual features of the contingent of trainees .	74
3.3. The modifications in the technology of automated training for the realization of the contour of adaptation based on the cognitive models..	75
3.4. The structure of the environment of automated training with the properties of adaptation based on the cognitive models	76
3.4.1. The appointment and functions of the adaptive electronic textbook.	78
3.4.2. The appointment and functions of the basic diagnostic module.	81
3.4.3. The appointment and functions of the applied diagnostic module.	83
3.4.4. The appointment and structure of the parametrical cognitive models block .	84
3.5. The processing and extraction of information, the structuring of data and the representation of knowledge for the filling of the electronic textbook .	85
3.5.1. The classification of the sources of information	89
3.5.2. The knowledge acquisition methods on subject area.....	91
3.5.3. The main models of the representation of knowledge.....	94
3.5.4. The information structure of the electronic textbook	95
3.5.5. The sequence of filling of the content of the electronic textbook by the structured information.....	97
3.5.6. The features of architecture of the adaptive electronic textbook.	100
3.5.7. The semantic model of representation, saving and extraction of information.....	102
3.6. The formal description of the adaptive information-educational environment on the basis of the theory of control..	105
3.6.1. The kinds of algorithms of functioning of the main components of the automated training system.....	108
3.6.2. The features of realization of adaptation in the automated educational environment.....	113
3.6.3. The specifics of the algorithm of training with the model of a trainee .	118
3.6.4. The estimation of parameters of the (cognitive) model.	122

4. The cognitive modeling technology for the system analysis of the information-educational environment.....	127
4.1. The iterative cycle of the cognitive modeling technology.	128
4.2. The technique of use of the cognitive modeling technology.	130
4.3. The ways of representation of the structure of the cognitive model.	133
4.4. The algorithm of formation of the structure of the cognitive model.	135
4.5. The technique of research of the parameters of the cognitive model of the subject of training.....	142
4.6. The technique of research of the parameters of the cognitive model of the means of training.....	144
4.7. The algorithm of processing of a posteriori data of testing.....	147
5. The parametrical cognitive models block for the analysis and the increase in the efficiency of functioning of the automated educational environment.....	151
5.1. The structure of the cognitive model of the subject of training.....	156
5.2. The structure of the cognitive model of the means of training.....	165
6. The complex of software for the automation of research tasks.	170
6.1. The complex of programs for the automation of the tasks of research.	172
6.2. The adaptive electronic textbook.....	175
6.3. The basic diagnostic module.....	185
6.4. The applied diagnostic module.....	191
7. The statistical substantiation of the practical use of the received results.....	203
7.1. The factors influencing on the efficiency of the formation of knowledge of a trainee in the automated educational environment.....	205
7.2. The features of organization and the plan of carrying out of the experiment.	207
7.3. The features of research of the parameters of the physiological portrait of the cognitive models of the subject and means of training.....	210
7.4. The features of research of the parameters of the psychological portrait of the cognitive models of the subject and means of training.....	218
7.5. The features of research of the parameters of the linguistic portrait of the cognitive models of the subject and means of training.....	230
7.6. The specifics of preliminary processing of a posteriori results of the diagnostics..	237
7.7. The features of choice of the methods of the statistical analysis of the created selections..	239
7.8. The analysis of the dynamics of resultativity of training for several years.	240
7.9. The results of the regression analysis.....	245
7.10. The results of the discriminant analysis.....	247
Conclusion.....	249
The list of reductions and symbols.....	250
The list of definitions.....	251
The bibliographic list.....	252
Appendix A. Codifiers (classifiers), data about the scientific supervisor and reviewers, bibliographic record (description) and abstract (annotation)..	271
