"The Saint-Petersburg state university" the faculty "Applied mathematics – control processes"

the chair "Information systems"

The theme of dissertation:

"The environment of automated training with the properties of adaptation based on the cognitive models" on the competition of scientific degree of the candidate of technical sciences on the spec. 05.13.01 – "The system analysis, control and information processing"

The chairman of "The dissertation council":

the head of the chair "Modeling of electromechanical and computer systems",

"The head are ready professor of "SDbSLII", dark are great Fearer Wilcoler Veriliaries.

"The honorary professor of "SPbSU"", d.ph.-m.s., prof. Egorov Nikolay Vasilyevich.

The scientific supervisor: the prof. of the chair "Information systems" of "SPbSU",

the member of "The American mathematical society",

d.ph.-m.s., prof. Kvitko Alexander Nikolaevich.

<u>The applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

"The Saint-Petersburg state university" the faculty "Applied mathematics – control processes" the chair "Information systems"

The plan of the meeting of "The dissertation council":

- I. The opening speech of the members of "The dissertation council".
- II. The scientific report with multimedia-presentation of the reporter (applicant).
- III. The answers the questions of the foreign and national members of "The dissertation council".
- IV. The performances of the members of "The dissertation council", the representative of the opposing (leading) organization, the official opponents and the scientific supervisor.
- V. The vote of the members of "The dissertation council".
- VI. The concluding remarks of the chairman and the members of "The dissertation council".
 on the dissertation

"The environment of automated training with the properties of adaptation based on the cognitive models"

on the competition of scientific degree of the candidate of technical sciences on the spec. 05.13.01 – "The system analysis, control and information processing"

The applicant: the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

"The Saint-Petersburg state university"
the faculty "Applied mathematics – control processes"
the chair "Information systems"

Part I. The opening speech of the members of "The dissertation council"

The chairman of "The dissertation council":

the head of the chair "Modeling of electromechanical and computer systems", "The honorary professor of "SPbSU"", d.ph.-m.s., prof. *Egorov Nikolay Vasilyevich*.

The scientific secretary of "The dissertation council":

the prof. of the chair "Modeling of electromechanical and computer systems", d.ph.-m.s., prof. *Kurbatova Galina Ibragimovna*.

The secretary of "The dissertation council":

the associate prof. of the chair "Modeling of electromechanical and computer systems", c.ph.-m.s., associate prof. *Varayun Marina Ivanovna*.

"The Saint-Petersburg state university"
the faculty "Applied mathematics – control processes"
the chair "Information systems"

Part II. The scientific report with multimedia-presentation of the reporter (applicant) on the dissertation

"The environment of automated training with the properties of adaptation based on the cognitive models"

on the competition of scientific degree of the candidate of technical sciences on the spec. 05.13.01 – "The system analysis, control and information processing"

<u>The reporter (applicant):</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

The existing contradictions and the priority aspects of informatization

- the technologies, being the basis of the existing means of training and training-methodical complexes practically do not take into account the features of information processing by the trainee as the subject of training;
- the improvement of organization and technology of the process of the automated training causes the need of the analysis of efficiency of functioning of the information-educational environment with taking into account of the individual features of the subjects of training (physiological, psychological, linguistic and etc.);
- the requirements to modern information-educational environments initiate monitoring, the realization of accumulation and expeditious data processing, characterizing individual dynamics of change of indicators of quality of formation of knowledge of trainees.

The relevance of the theme of dissertation research

is explaining by the evolution of priorities from outside of the state and international bodies regulating the policy of development of the system of education and informatization of educational sphere, the extension of requirements to the synthesis of information environments of educational establishments, the imperfection of scientific-methodical and technological device for support the analysis and assessment of efficiency of information exchange between the subjects and means of training, the need of creation of the universal scientific approach (method and technology) to the assessment of quality of training, and also continuous development and innovations in the field of the information technologies.

The purpose of research is

the increase in the efficiency of functioning of the information-educational environment of the automated (remote) training system due to realization of the individually-oriented formation of knowledge of the trainee with the use of the adaptive generation of educational influences based on the parametrical cognitive models block.

The object of research

the information-educational environment of the automated (remote) training system of educational establishment.

The subject of research

the automated (remote) training system with the properties of adaptation based on the parametrical cognitive models block.

The methods of research

- theoretical the theory of systems, the system analysis and modeling, the theory of control, structuring and representation of knowledge, engineering psychology and pedagogics;
- experimental the applied methods of theory of information, the physiology of sensory systems (analyzers), cognitive psychology and applied linguistics.

The achievement of the purpose of research realizes the complex of research tasks

- the analysis of theoretical bases of construction of the automated IEE of the adaptive training with the model of subject of training at the base of the theory of automatic control, organizational models and technologies of interaction of subjects with means of training;
- the development of the structure of IEE of the automated (remote) training system with the properties of adaptation based on the parametrical cognitive models block;
- the creation of the cognitive modeling technology for the system analysis and increase of efficiency of functioning of the automated information-educational environment;
- the synthesis of the parametrical cognitive models block as inf. basis of the system analysis: the formation of the CM of subject of training and the CM of means of training in the basis of the IEE of ART;
- the realization of the complex of programs for the automation of research tasks, including: the adaptive electronic textbook, the basic and applied diagnostic modules.

The main scientific results, submitted on defence:

- the structure of information-educational environment and principles (algorithms) of functioning of components of the automated (remote) training system with the properties of adaptation based on the parametrical CM block [slides 1.1–1.8.3];
- the cognitive modeling technology, including the technique of its use, the recommended innovative bases (models) and the algorithm of formation of the structure of cognitive model, the techniques of research of the parameters of cognitive models and the algorithm of processing of a posteriori data of testing [slides 2.1.1–2.7.2];
- the structures of the cognitive models of subject of training and the means of training [slides 3.1–3.8];
- the complex of programs, including the adaptive electronic textbook (the individually-oriented generation of educational influences by means of the adaptive representation of information fragments processor), the basic diagnostic module (the estimation of the level of residual knowledge of a trainee) and the applied diagnostic module (the diagnostics of parameters of the cognitive model of subject of training) [slides 4.1.1–4.20.1];
- the statistical justification of practical use of the received results (by means of preliminary processing of a posteriori data, the secondary processing of selections of a posteriori data: some results of the regression analysis, the discriminant analysis, multidimensional scaling and the factor analysis) (*) [slides 5.1-5.6.2].

The reliability of the scientific results of dissertation research and publications

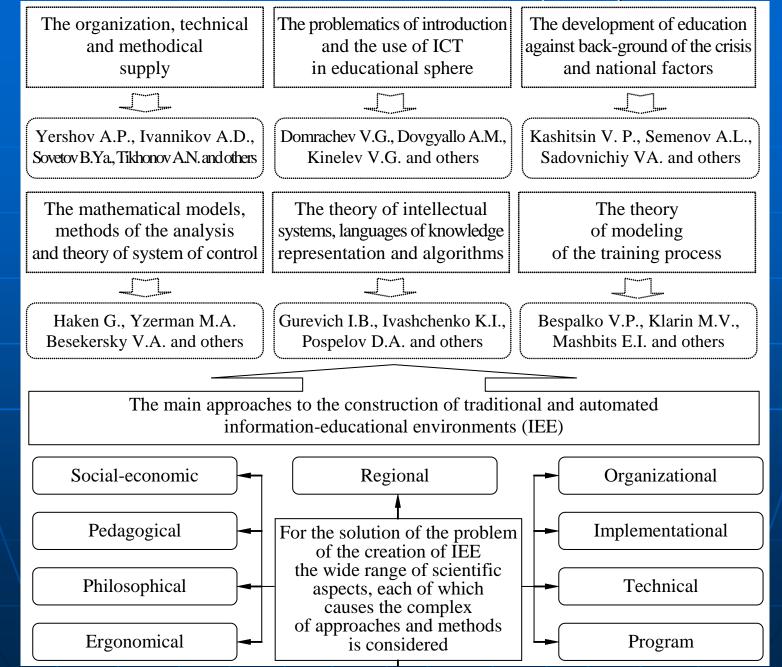

The reliability of the scientific results of dissertation research is confirmed by:

- the system approach to the description of the selected difficult object of research;
- the correct use of fundamental provisions of the theory of information, physiology of sensory systems, cognitive psychology, applied linguistics and ergonomics;
- the approbation of elements of the dissertation on seminars and conferences "IHEAS" and "RAS";
- the introduction of results in learning process of "SPbSETU "LETI"" and "IBI", the reasonable application of experimental methods and the strict logic of carrying out of experiment;
- the results of statistical processing of a posteriori data, training of 10 diploma students.

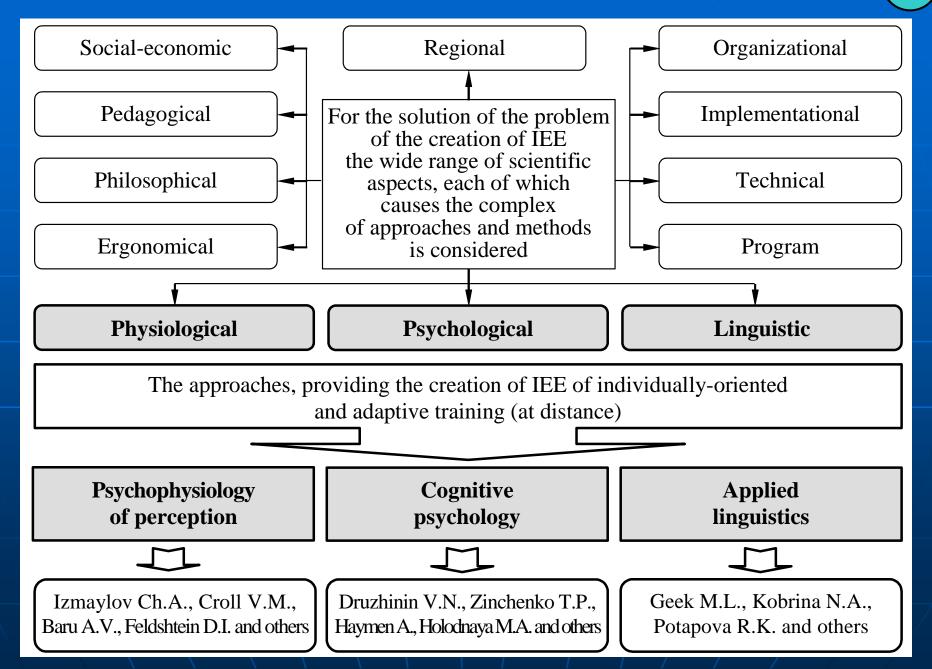

The basic results of diss. were publ. in 52 on 2007 y. (106 on 2012 y.) [265 on 2018 y.] scientific works:

- 01 textbook and 03 methodical instructions to lab. works on the discipline "Computer science";
- 01 textbook (10 volumes) on the discipline "Finance, monetary circulation and credit";
- 02 units in 01 coll. scientific monography of "IHEAS" (with formal coauthors-teachers);
- 04 (10) learning manuals and scientific monographies (with coauthors-diploma-students);
- 12 (29) [49] learning manuals and scientific monographies (without coauthors);
- 01 (02) report(s) on the individual initiative SRW (2003-2005 y. and 2006-2008 y.);
- 01 appendix to the report on the individual initiative SRW (2003-2005 y.);
- 05 (09) [14] scientific articles in scientific journals, recommended by "HSAC of RF", from them 00 (05) scientific articles were deposited in ""VINITI" of "RAS"";
- 22 (48) [182] scientific reports in materials of 11 (24) [39] int. scientific conferences;
- 04 copyright certificates about deposition and registration of works objects of intellectual property in "RAS" (RF, Moscow city). In 2005-2007 y. (2012 y.) [2018 y.] the norm for the candidate (doctor) of techn. sciences is executed (it was required 02 (10) scientific articles in scientific journals from the list of "HAC of RF").

The scientific aspects of informatization of the information-educational environment and the theoretical-methodical base of research (1 from 2)

The scientific aspects of informatization of the information-educational environment and the theoretical-methodical base of research (2 from 2)

The models of organization of interaction of the subjects and means of training for a solution of the problem of adaptation in the information-educational environment

Means of IEE provide visual and sound representation to subject of training of strictly certain sequence of informationeducational influences At right action (answer) of the subject of training it is similar to linear model, and in case of incorrect – is initiating transition to the previous step of educational trajectory

Action (answer) of subject of training initiates transition to a certain branch of educational trajectory and provides representation of a portion of information

Linear model (Skinner B.F., USA, Harvard)

LM with feedback (Pressi S.L., USA, Ohio)

Branched model (Krouder N.A., USA, Illinois)

For solution of the problem of adaptation in the IEE of the automated (remote) training

Branched multilevel model

Hybrid model

Adaptive model (Pask A.G.S., GB, Cambridge)

Provides representation of information-educational influences of the same fragment of the discipline with various level of difficulty (the level of statement of a content) In a d v a n c e s e t or a n y s w i t c h i n g between the listed models of generation of informationeducational influences of a certain means of training is providing

At generation of informationeducational influences the individual features of the identity of subject of training at the base of cognitive model of subject of training are considering (Vetrov A.N.)

Class-lesson technology

Design-group technology

Technology of the correspondence training

Individual orientation of information interaction between the subjects and means of training in IEE is reaching due to the use of a set of technologies

Technology of the individual training

Technology of the individualized training

Technology of the adaptive training

Realizes the topological scheme of information interaction "subject – means of training – (teacher)" at study in g of educational trajectory in IEE

Allows to take into account in dividual features of the identity of subjects of training during the educational process, realized in the traditional or IEE of ART

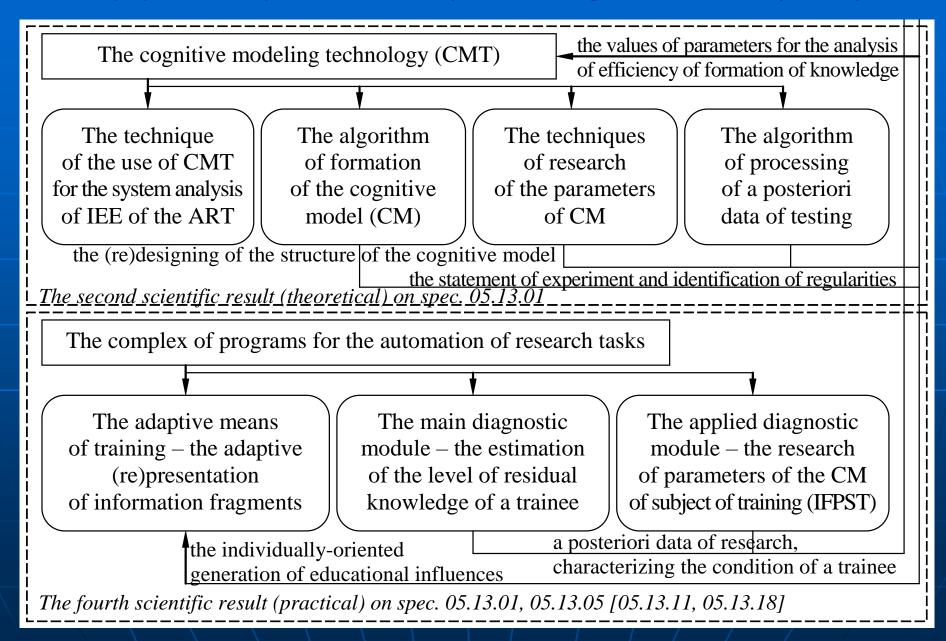

Allows to realize the contour of adaptation in IEE of ART based on parametrical cognitive m o d e l s b l o c k of subject and means of training, offered in this work

with the properties of adaptation based on the parametrical cognitive models block (1 from 2)

The solution of a complex task of the synthesis of the information-educational environment (IEE) of the automated training with the properties of adaptation based on the cognitive models block The entering of modifications The entering of new components The automated training into the automated training into structure, organization system with the properties of adaptation based on CM and technology of training system Additional The modifications The modifications The parametrical actions of the electronic of the diagnostic cognitive models in the organization module textbook and technology of ART (ET) (DM) block The cognitive The modified The modified The modified model principle (algorithm) principle (algorithm) structure of subject of training of functioning of information of functioning environment of the electronic of the diagnostic The cognitive of the automated textbook module model training for the realization for the diagnostics of means of training of IFPST of establishment of adaptation The third scientific result (theor.) on spec. 05,13.01 and 19.00.02 The first scientific result (theoretical) on spec. 05.13.01

The complex approach to the synthesis of the information-educational environment of the automated training

with the properties of adaptation based on the parametrical cognitive models block (2 from 2)

The main requirements presented to the structure of the cognitive modeling technology and the cognitive models

The synthesis of the automated training system with the properties of adaptation based on the parametrical cognitive models block demands the elaboration of complex approach

The modification of structure and principles (algorithms) of functioning of the components of automated training system for the realization of adaptation based on the cognitive models block

The cognitive modeling technology (CMT)

The technique of use of CMT and the algorithm of formation of the cognitive model

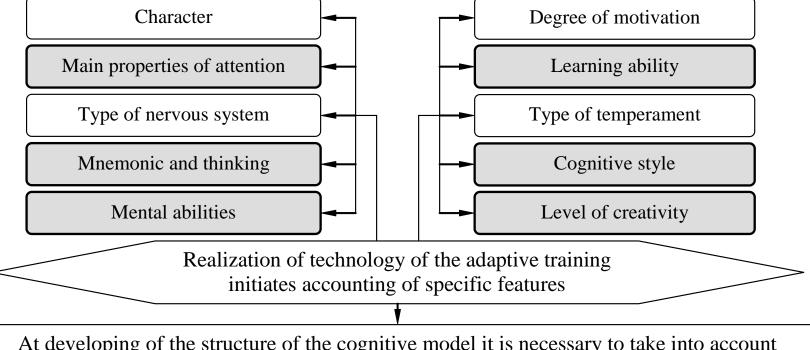

The cognitive models of subject of training and means of training

Is universal
in relation to the object
of research, represents
the iterative cycle,
including a set
of stages and allowing
not only to receive the primary
representations, but also to carry out
the structural analysis

Are developed for the formalization of the sequence of the use of the cognitive modeling technology with the purpose of construction the structure of cognitive model for the tasks of the system analysis of information-educational environment

Concentrates in the own basis
a set of the parameters,
characterizing the IFPST
(the CM of subject of training)
and the technical capabilities
of means of training, on the basis
of which the generation
of information-educational influences
(the CM of means of training) is realized

The main requirements presented to the structure of the cognitive models of subject of training and means of training

At developing of the structure of the cognitive model it is necessary to take into account a set of specific requirements

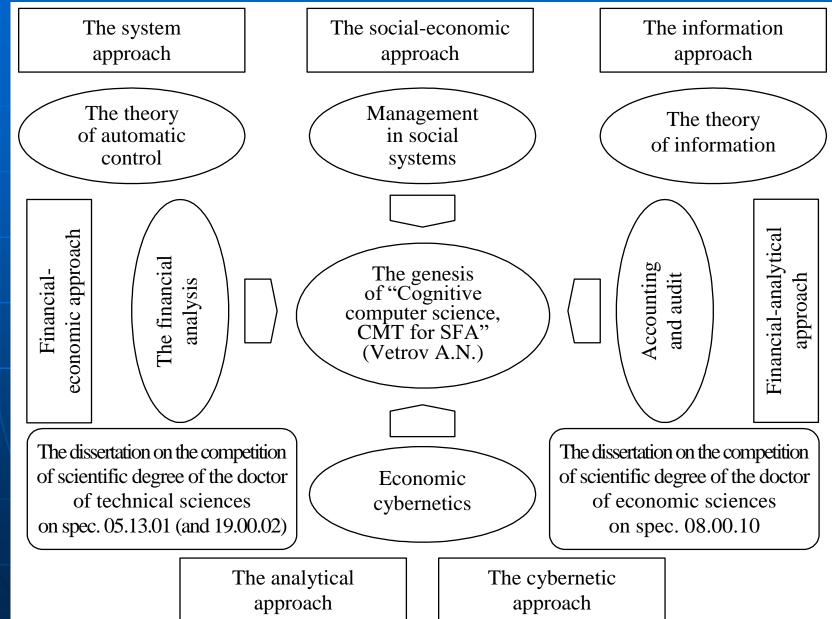

Relevance

Adequacy

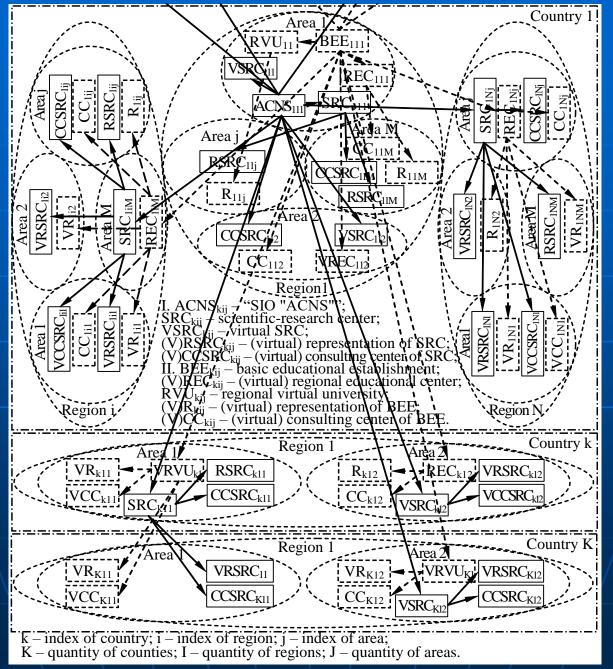

Solvency

IEE must consider only those individual features of the subject, which are essential for achievement of the planned purposes of the training process with taking into account IFPST IEE must provide the compliance of model of subject to its original, is extremely important division of steady and situational individual features of subjects and means IEE must support
the quasidynamic updating
of model of the subject of training
due to systematic
updating and accumulation
of data about his condition

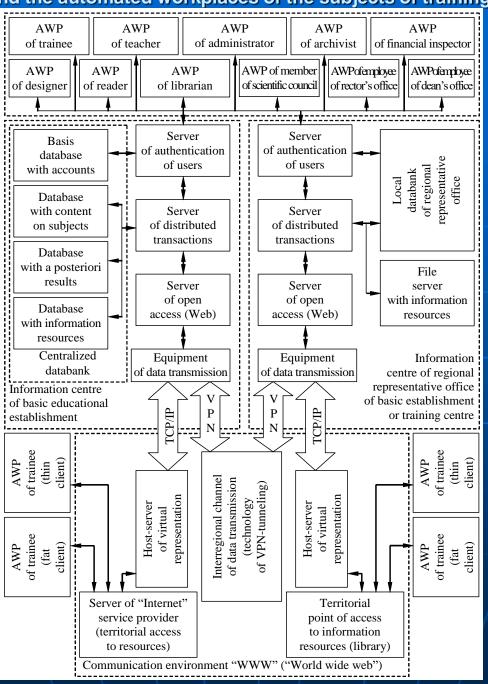

The genesis of "Cognitive computer science, the cognitive modeling technology for the system and financial analysis" as new (academic) scientific direction (according to the decision of "The Presidium of "The Russian academy of natural science"", the protocol №699 from the 08th of June 2018 y.)

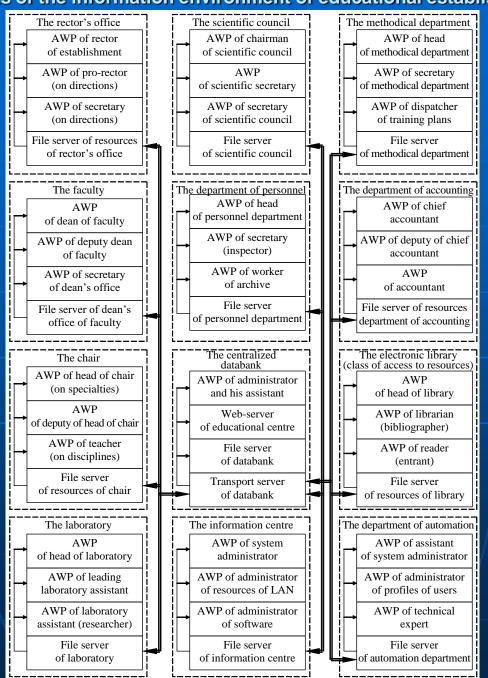

The structure of the territorially distributed information-educational environment: as the example of the geographically distributed (countries), regions and areas

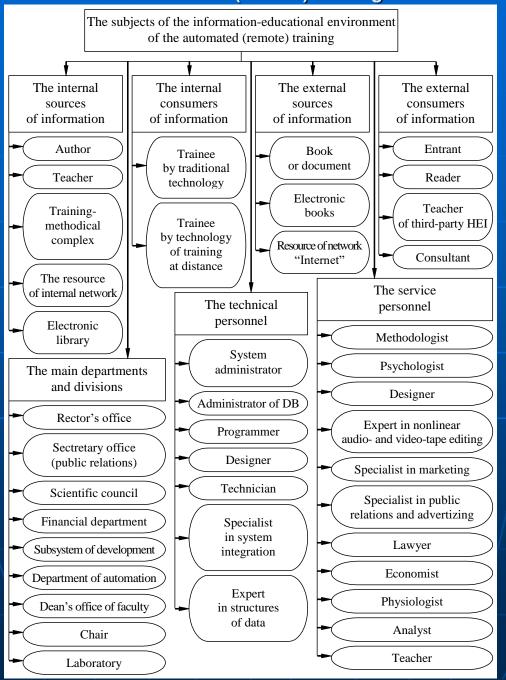

The standard scheme of interaction of the information centre of educational establishment and the automated workplaces of the subjects of training

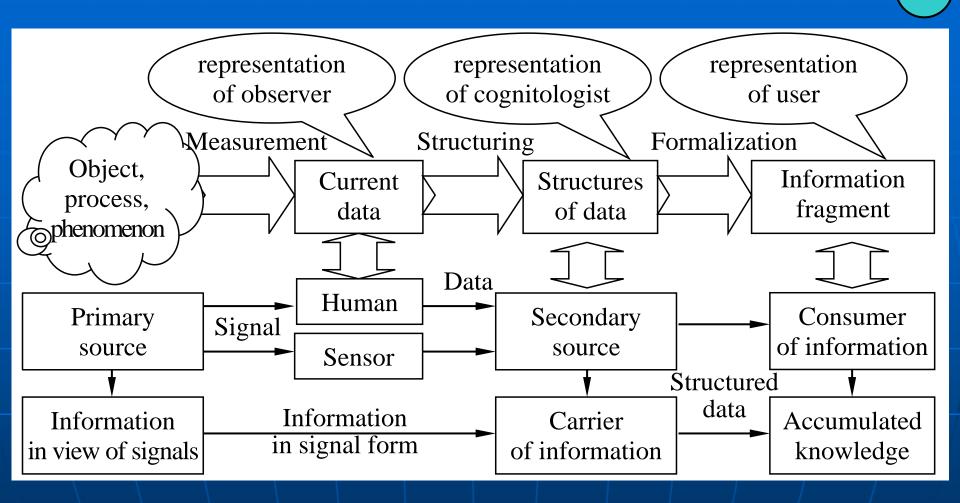

The standard scheme of interaction of the automated workplaces of the subjects of the information environment of educational establishment

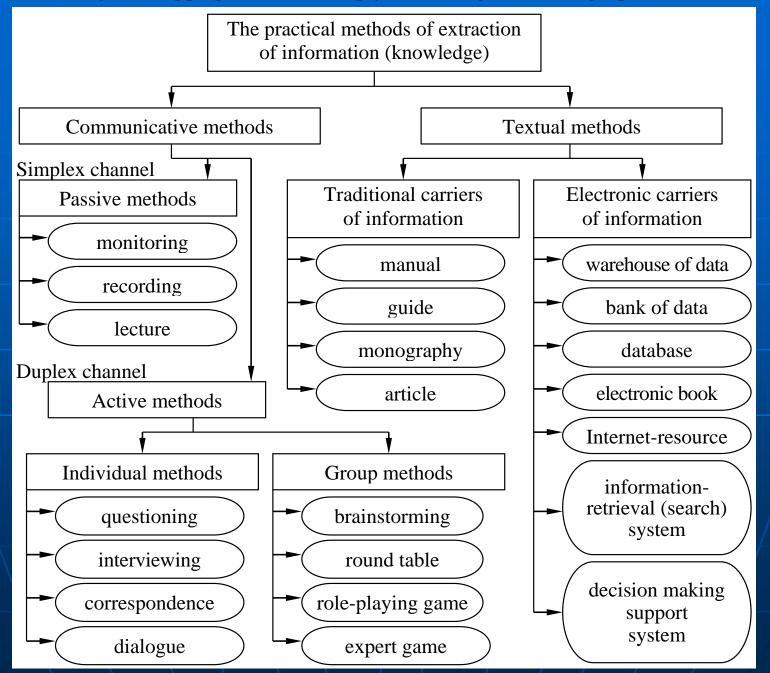

The classification of the subjects of the information-educational environment of the automated (remote) training

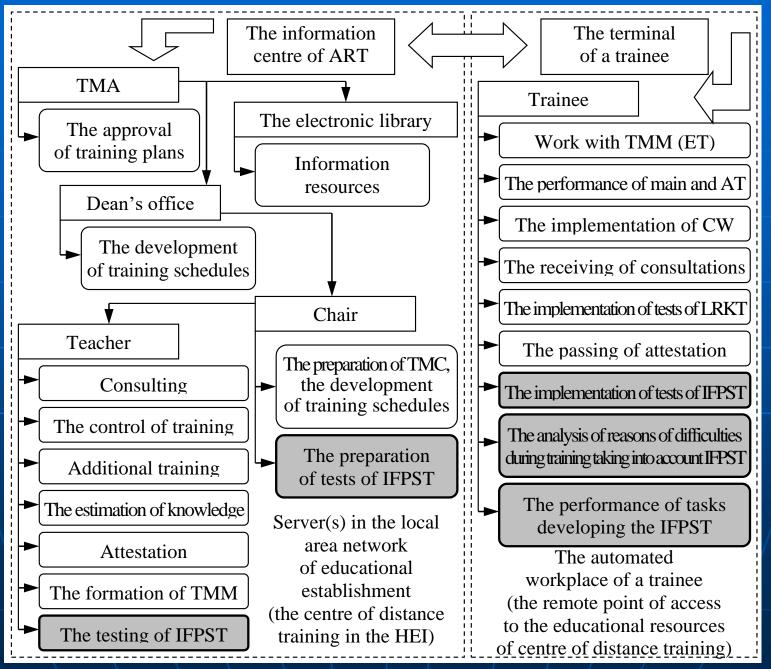

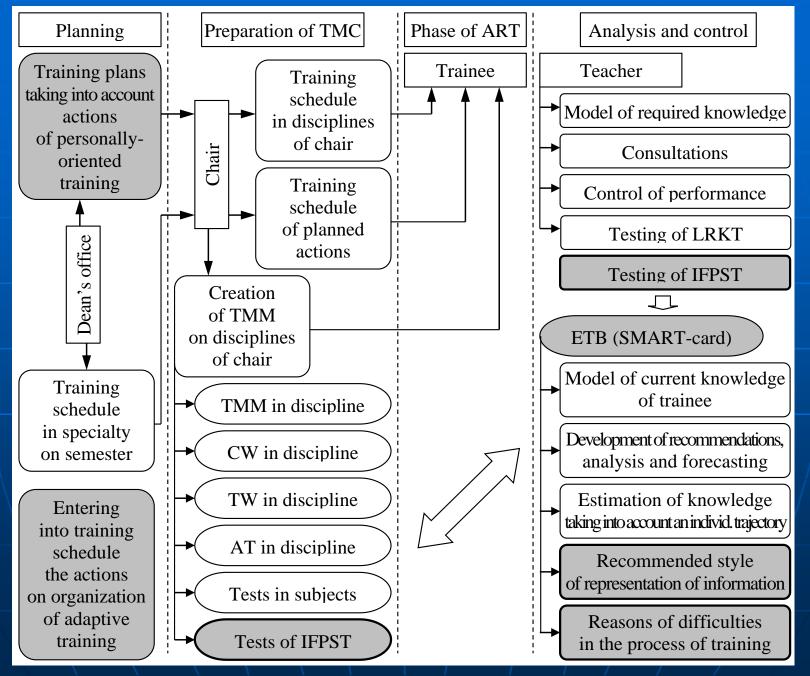

The classification of the practical methods of extraction and transmission of information (as the aggregate of knowledge) on the subjects of studying

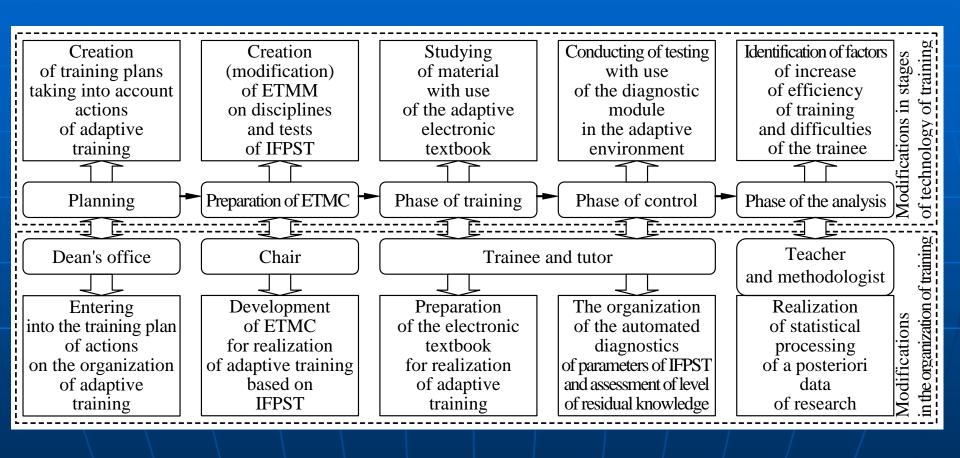

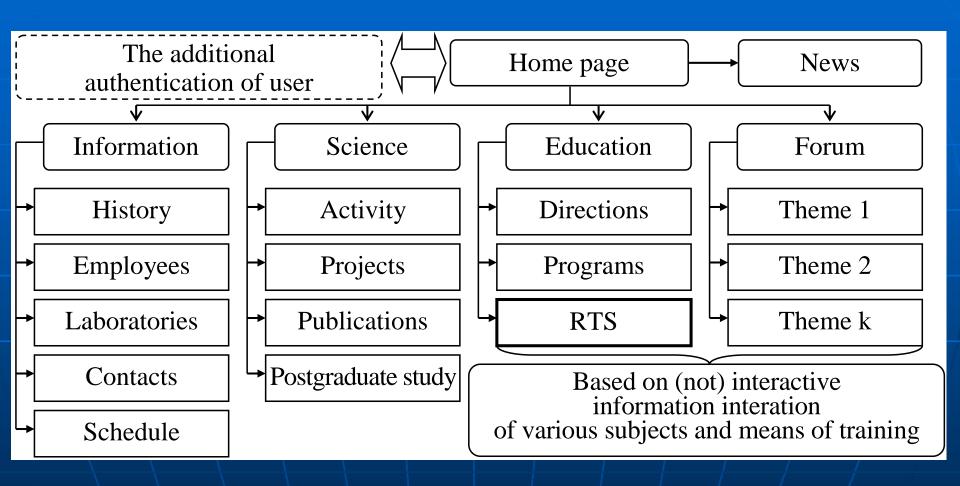

Modifications in the organization of the information environment of educational establishment for the support of accounting of the individual features of personality of the subjects of training

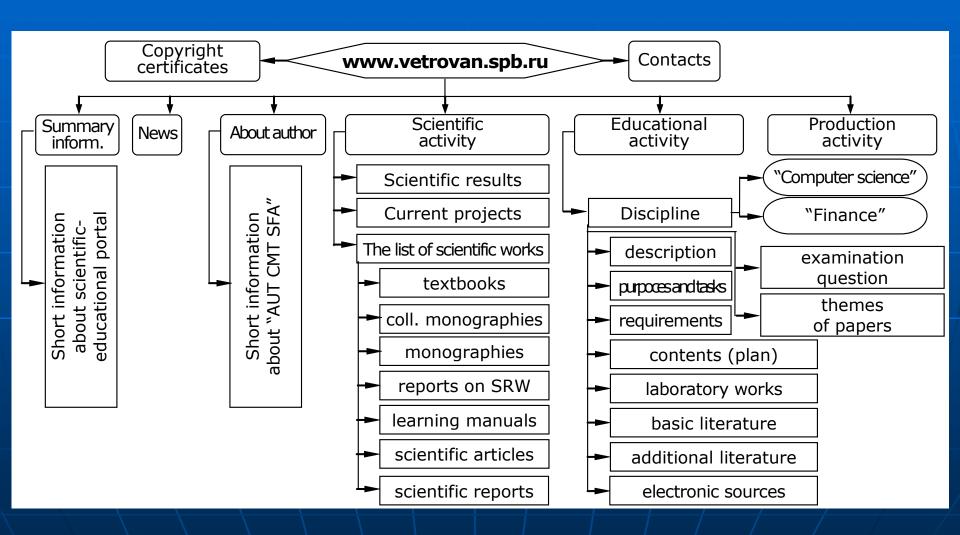

Modifications in the technological process of formation of knowledge at the realization of the automated personally-oriented training

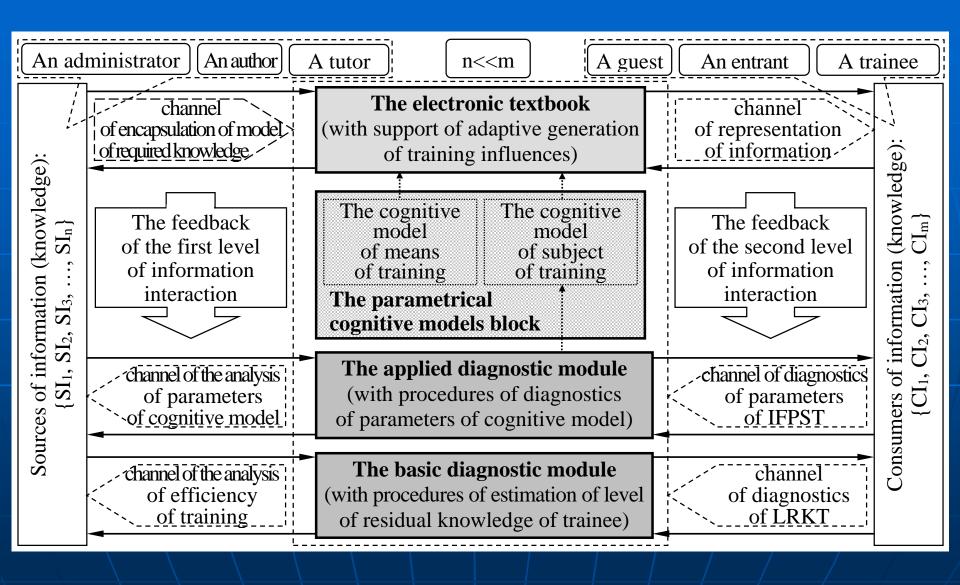

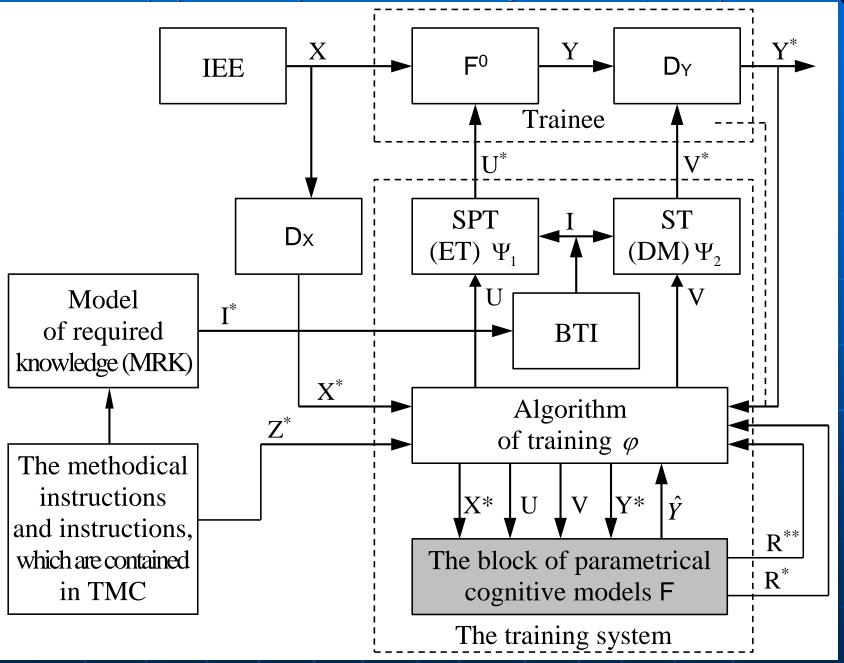

The structure of the information-educational portal of teacher (scientist): on the example of the scientific-educational portal of "AUT CMT SFA" Vetrov A.N. (in the international foreign English language and the national Russian language)

The structure of the automated training system with the properties of adaptation based on the parametrical cognitive models block

The formal description of the structure of the automated training system with the properties of adaptation based on the cognitive models (1 from 3)

1. The condition of trainee and its estimation:
$$\int Y = I$$

$$\begin{cases} Y = F^{\circ}(X, U) \\ \hat{Y}_{n} = F(X_{n}^{*}, U_{n-1}, V_{n}, Y_{n}^{*}) \end{cases}$$

2. The algorithm of training φ forms addresses and parameters of TI and control questions:

$$\begin{cases} U_{in} = \varphi(X_n^*, \hat{Y}_{n-1}, Z_n^*, C_{n-1}); n \in [1,k] \text{- number of step, } i \in [1,N] \text{- number of information fragment;} \\ V_{in} = \varphi(X_n^*, \hat{Y}_{n-1}, Z_n^*, R_{n-1}) \end{cases}$$

$$C = [C^*, C^{**}], C^* \text{- potential possibilities of means of training}$$

$$\text{(the CM of means of training)}, C^{**} \text{- IFPST (the CM of subject of training)}$$

3. The databank of training information:

4. The shaper of a portion of training (SPT) and the shaper of tests (ST):

$$\begin{cases} U_{in}^* = \Psi_1(U_{in}, I_{in}^U) & U_{in}^*(t_{n-1}) \Rightarrow Y_i^*(t_n) \\ V_{in}^* = \Psi_2(V_{in}, I_{in}^V) & (i \in [1, N], n \in [1, k]) \end{cases}$$
 provides the adaptive generation of TI U* and control questions V* with the use of addresses in DB and parameters of display U_i and V_i on the basis I

5. The resultativity of performance of test tasks:

$$Y^* = D_Y(Y, V^*)$$
 calculation with the operator D_Y (sensor) on the basis of the condition of trainee Y and a set of questions V^*

6. The task and the purpose of training is represented in the view:

$$Z^* = \begin{cases} Q(Y^*) \to \delta, & \delta \text{- the required LRKT} \\ T(Y^*) \to \min, \end{cases} \qquad Y_0 \to Y^{**} - CAP(cond._abs._proficiency) \\ Q_n \approx \delta(\delta \approx Q^*) \end{cases}$$

7. The condition of the trainee on the n-th step:

$$Y_n \Leftrightarrow P_n \quad P_n = \{p_1^n, p_2^n, ..., p_i^n, p_N^n\} \quad p_i^n \Big|_{t_n} \in [0,1]$$
 probability of ignorance of the i-th element $p^{**} = 0$.

The probability of ignorance of the i-th element $p^{**} = 0$.

8. The condition (the probability of ignorance of contents) of j-th trainee changes by means of a set of TI:

$$P_n^j = F_n^j(P_{n-1}^j, U_n^j, C_{n-1}^j) P_{n-1}^j \Big|_{C_{n-1}} \xrightarrow{U_n} P_n^j$$

9. As the condition of the trainee curecuy is not observed $Y_n \Leftrightarrow P_n$, therefore testing is necessary. At the same time reaction (answer) of the trainee:

$$\begin{cases}
R_n = F^0(P_n, U_n, V_n) \\
R_n = (r_{u_1}^n, r_{u_2}^n, ..., r_{u_i}^n, ..., r_{u_{M_n}}^n)
\end{cases}$$

$$r_{u_i}^n = \begin{cases}
0 & U_n - \text{educational influence of the set level of difficulty} \\
1 & \text{(on the basis of the level of required knowledge)}
\end{cases}$$

10. The task and algorithm of adaptation of the parameters of cognitive models in the process of training:

$$C_n = \chi(C_{n-1}, R_n)$$
 $Y_n \Leftrightarrow P_n = \chi(P_{n-1}, U_n, R_n)$

11. The algorithm of training allows to define the optimum portion of TI at each step:

$$Q(P_{n+1}) = Q(F(P_n, U_{n+1}, C_n)) \rightarrow \min_{U_i, R_i} \Longrightarrow U_{n+1}^*,$$

 $Q(P_{n+1}) = Q(F(P_n, U_{n+1}, C_n)) \rightarrow \min_{U_i, R_j} \Rightarrow U_{n+1}^*,$ 12. The probability of ignorance of the elements of TI: $\alpha_i^{n+1} = \begin{cases} \alpha_i^n (i \notin U_n) \\ \gamma' \alpha_i^n (i \in U_n; r_i^n = 0) \end{cases}$

$$p_i^n = p_i(t_i^n) = 1 - e^{-\alpha_i^n t_i^n} (i \in \{1, ..., N\}, n \in \{1, ..., \infty\})$$

$$\gamma'' \alpha_i^n (i \in U_n; r_i^n = 1; n = 1, 2, ...)$$

$$Q_{n} = \sum_{i=1}^{N} p_{i}(t_{i}^{n})q_{i} \quad Q_{n} = \sum_{i=1}^{N} p_{i}(t_{i}^{n})q_{i} \rightarrow \min_{U_{n} \in \Phi(L_{n})} \Rightarrow U_{n}^{*}$$

13. The criterion of quality of training:
$$Q_{n} = \sum_{i=1}^{N} p_{i}(t_{i}^{n})q_{i} \quad Q_{n} = \sum_{i=1}^{N} p_{i}(t_{i}^{n})q_{i} \rightarrow \min_{U_{n} \in \Phi(L_{n})} \Rightarrow U_{n}^{*}$$

$$u_{1} = \max_{i \in [1,N]} p_{i}(t_{i}^{n})q_{i}$$

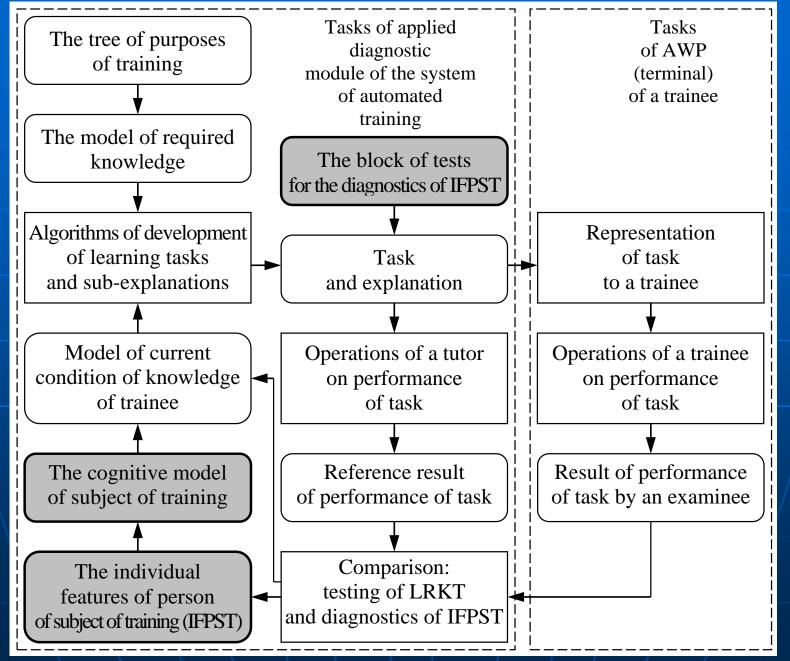

$$u_{2} = \max_{i \in [1,N](i \neq u_{1})} p_{i}(t_{i}^{n})q_{i}$$

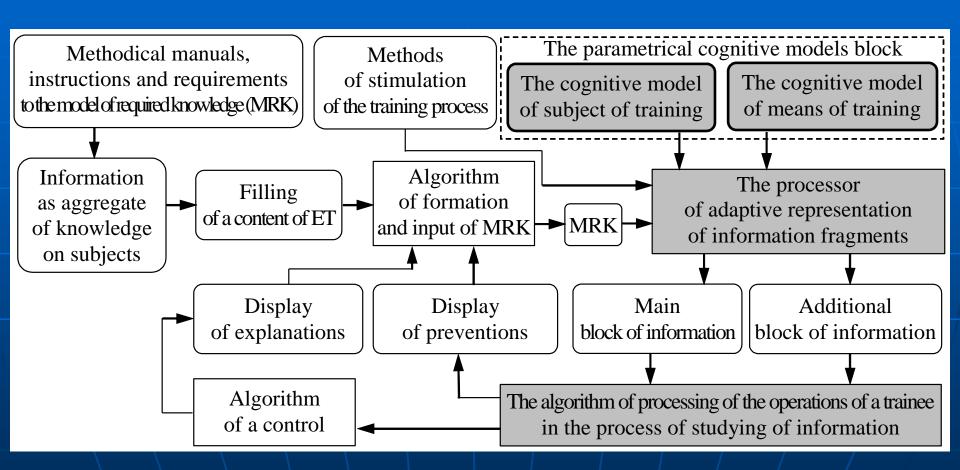

$$u_{3} = \max_{i \in [1,N](i \neq u_{1})} p_{i}(t_{i}^{n})q_{i}$$

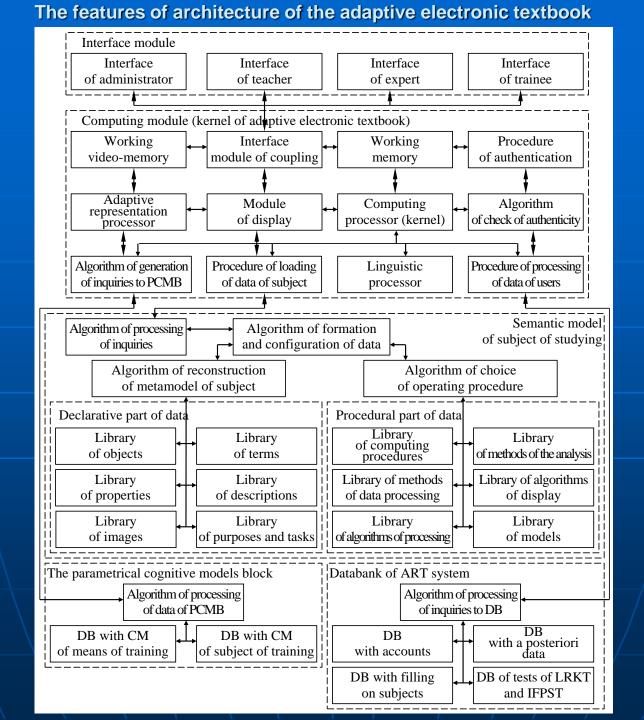

$$u_{4} = \max_{i \in [1,N](i \neq u_{1})} p_{i}(t_{i}^{n})q_{i}$$

$$u_{4} = \max_{i \in [1,N](i \neq u_{1})} p_{i}(t_{i}^{n})q_{i}$$

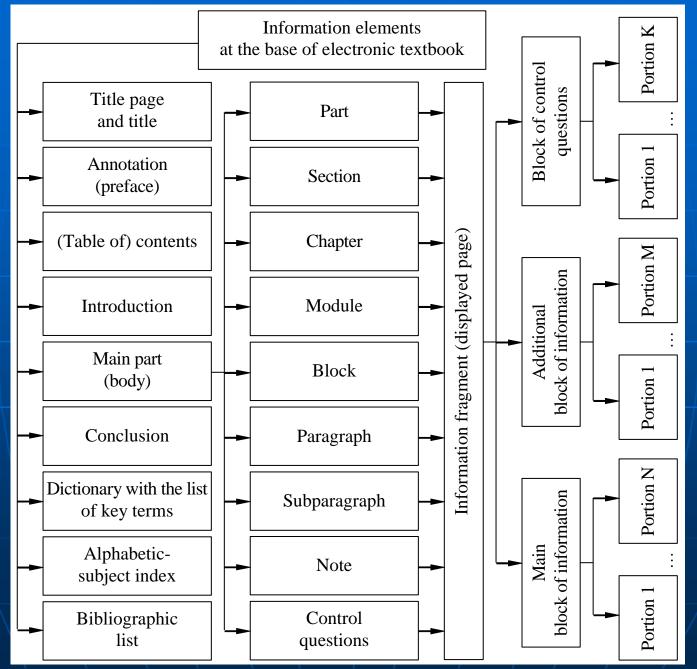

The scheme, reflecting the principle (algorithm) of functioning of the basic and applied diagnostic modules

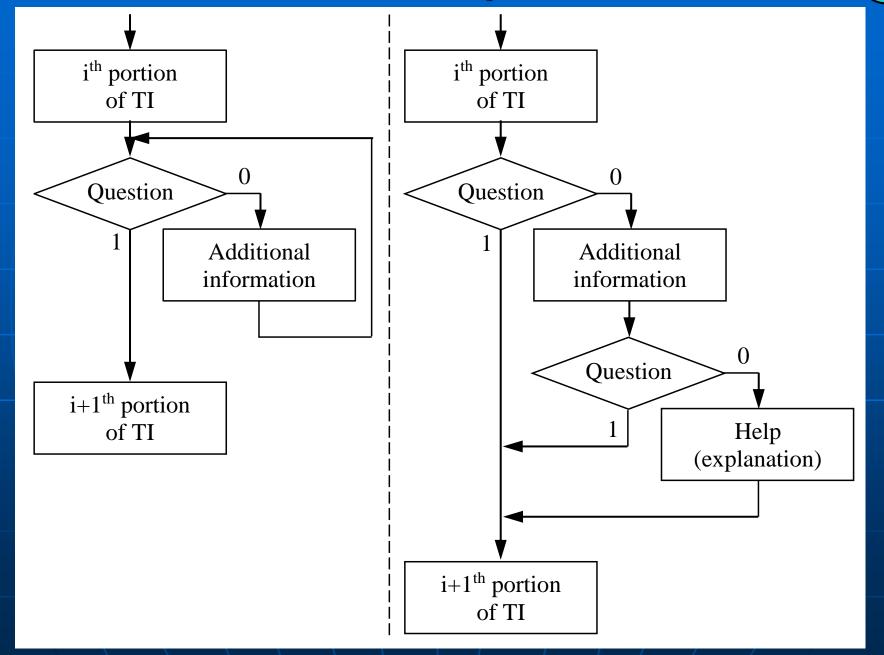

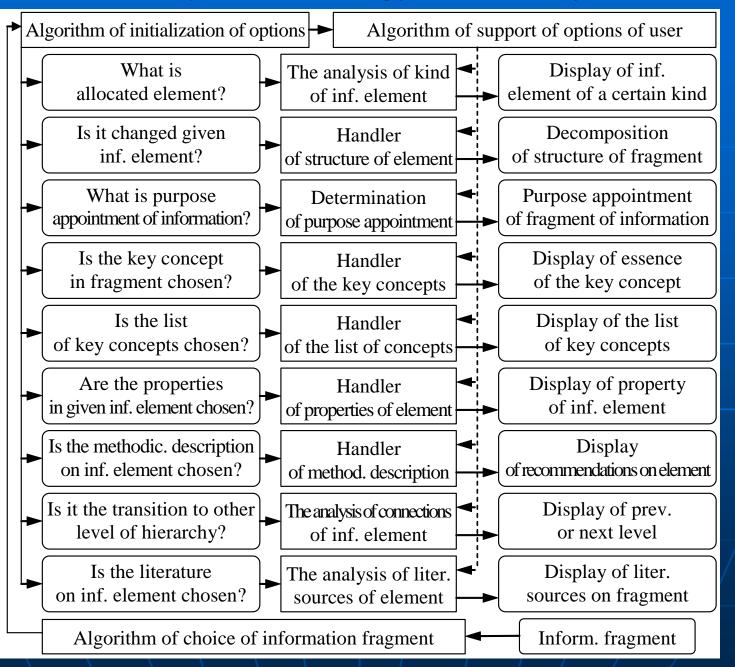

The information structure of the subject of studying, displayed at the level of representation of data by means of the electronic textbook

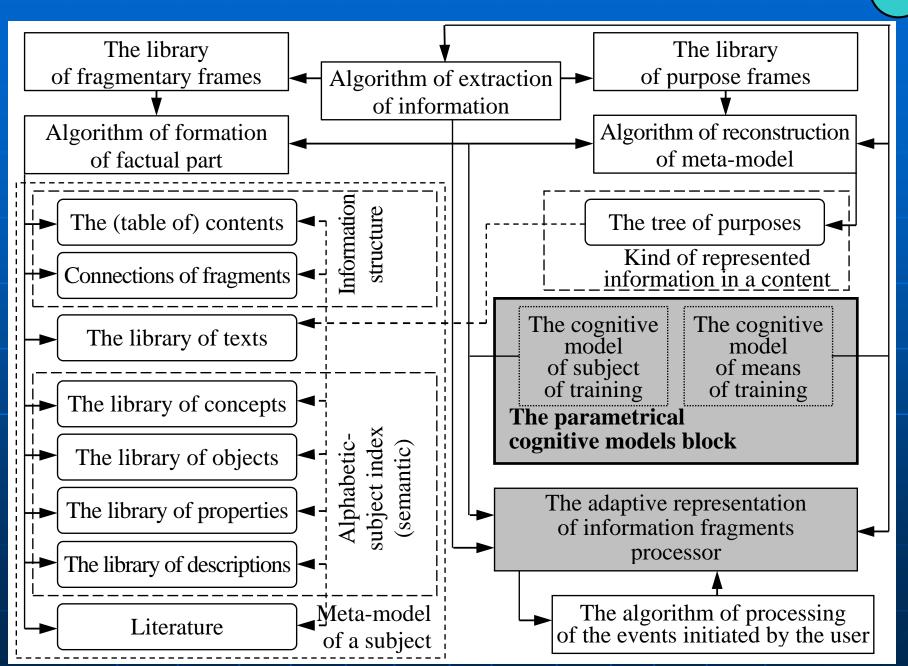

The schemes of realization of branching (1 – correct answer, 0 – wrong answer): at the left – linear model and at the right – branched model

The algorithm of formation of the structure of cognitive model for the analysis of the information-educational environment of the automated training (2 from 2)

At the preliminary	7
stage	_

In the result of the analysis of question-answers structures of test is reached the calculation of indicators necessary for the conducting of testing: it is formed the interval scale and function of estimation

$$\begin{cases} b_0 = 0; \\ b_{\text{max}} = n \end{cases}$$

On the first step

1.1 It is defined the maximally and minimally possible number of correct answers for the procedure of estimation and formation of function of estimation

On the second step

1.2 There are set up the lower and top threshold values of sums of correct answers (points) for the exposure of corresponding nominal values of estimates

On the third step

1.3 There are formed the intermediate borders of intervals on the basis of sums of correct answers (points) for the set up of intermediate nominal values of estimates (is formed the interval scale of estimation)

On the fourth step

1.4 On the basis of interval scale the function of estimation of the diagnostical module is set up

 $\begin{cases} [b_0 = 0] - mark(nominal) = 1; \\ [b_1, b_2] - mark(nominal) = 2; \\ [b_2, b_3] - mark(nominal) = 3; \\ [b_3, b_4] - mark(nominal) = 4; \\ [b_4, b_5 = n] - mark(nominal) = 5; \\ [b_0 < b_1 < b_2 < b_3 < b_4 < b_5 \\ [b_0 < x < b_1; \\ 2, b_1 < x < b_2; \\ 3, b_2 < x < b_3; \\ 4, b_3 < x < b_4; \\ 5, b_4 < x < b_5 = n; \end{cases}$

At the stage of testing

There is carried out the preparation of software to the testing of target indicators: the interval scale and function of estimation in the mode of administrating is brought for the support of functioning of algorithmic structure

At the stage of the analysis of results

The saved-up a posteriori data are exposed to the statistical processing, allowing to carry out the analysis and to formulate the conclusions about current condition (level of residual knowledge of examinee and his personal characteristics)

- [3.1] The coefficient of difficulty of task, proceeding from which value is defined: at K>0,9 – the task is difficult, at K<0,2 – the task is easy

- 3.8 Dispersion of results of testing on the j^{th} task $\delta_j^2 = \frac{\sum_{i=1}^{N} (x_i p_j)^2}{N-1}$

Total result of performance of all tasks by the
$$i^{th}$$
 examinee $y_j = \sum_{j=1}^{M} x_{ij}$ Standard deviation of results of all tasks by the i^{th} examinee of testing on j^{th} task

3.2 Total result of performance of all tasks by the
$$i^{th}$$
 examinee $y_j = \sum_{j=1}^{N} x_{ij}$ Standard deviation of results of testing on j^{th} task by all examinees $x_j = \sum_{i=1}^{N} x_{ij}$ Standard deviation of results of testing of testing $\delta_j = \sqrt{\delta_j^2}$ of testing of testing $\delta_j = \sqrt{\delta_j^2}$ with the sum of points on all test $r_j = \frac{\sum_{i=1}^{N} (x_{ij} y_i)^2}{N} \cdot \frac{N}{N-1}$

$$\delta_{j}^{2} = \frac{\sum_{i=1}^{\infty} (x_{i} - p_{j})^{2}}{N - 1}$$

$$K_{j} = \frac{N_{j}}{N}$$

$$\delta_j = \sqrt{\delta_j^2}$$

$$y_{j} = \frac{\sum_{i=1}^{\infty} (x_{ij} y_{i})^{2}}{N \delta_{i}^{2} \delta_{y}} \cdot \frac{1}{N}$$

$$\bar{Z} = \frac{\sum_{i=1}^{N} Z_i}{N}$$

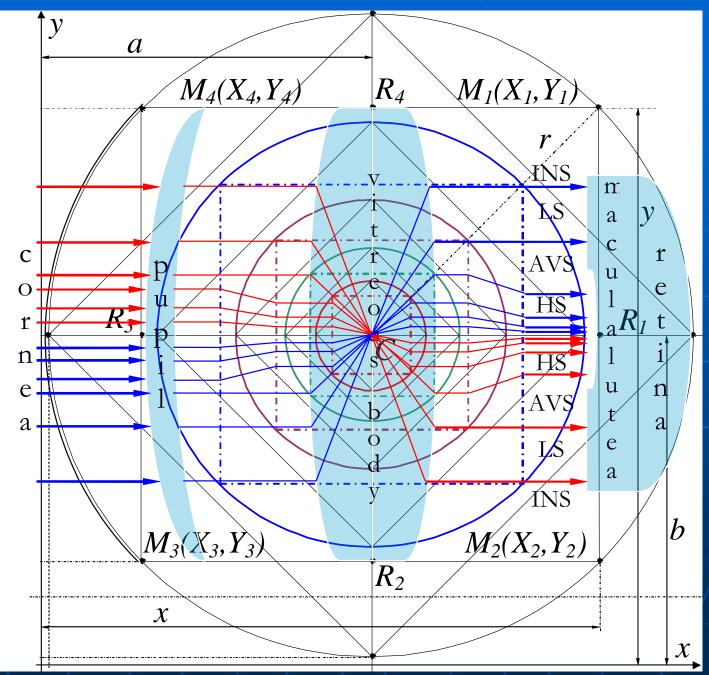

$$\delta_Z = \sqrt{\frac{\sum_{i=1}^{N} (Z_i - \bar{Z})^2}{N - 1}}$$

$$\begin{bmatrix}
\frac{1}{2} \\
\frac{1}{2}
\end{bmatrix} V = \frac{\sum_{i=1}^{N} (Z_i y_i)}{N - \bar{Z} \bar{Y}} \cdot \frac{N}{N - 1}$$

The structure of the modified model of reduced eye of human

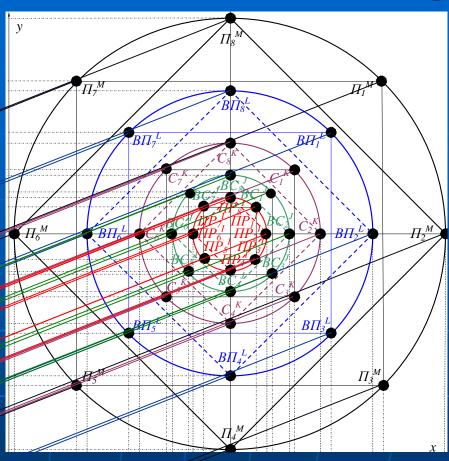

The structure of the modified model of reduced ear of human

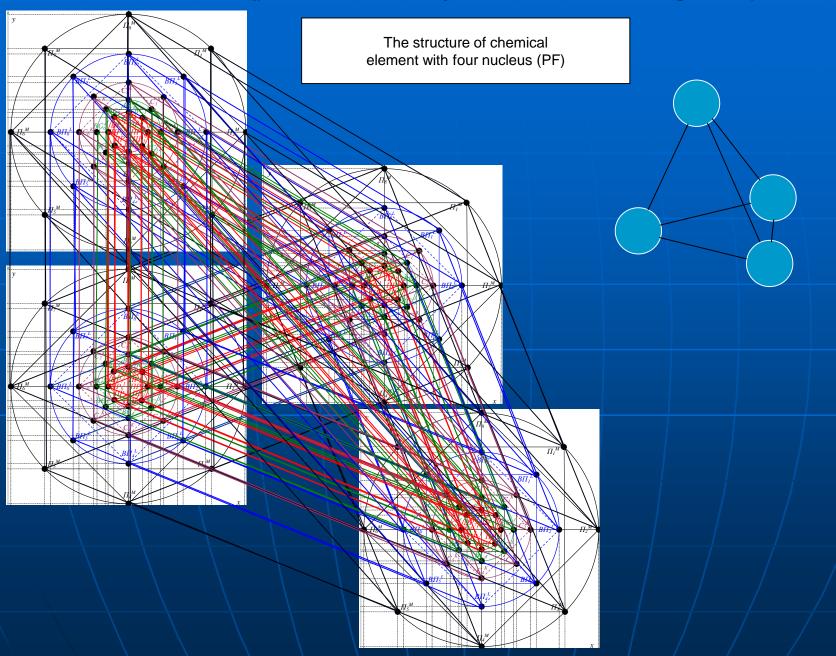

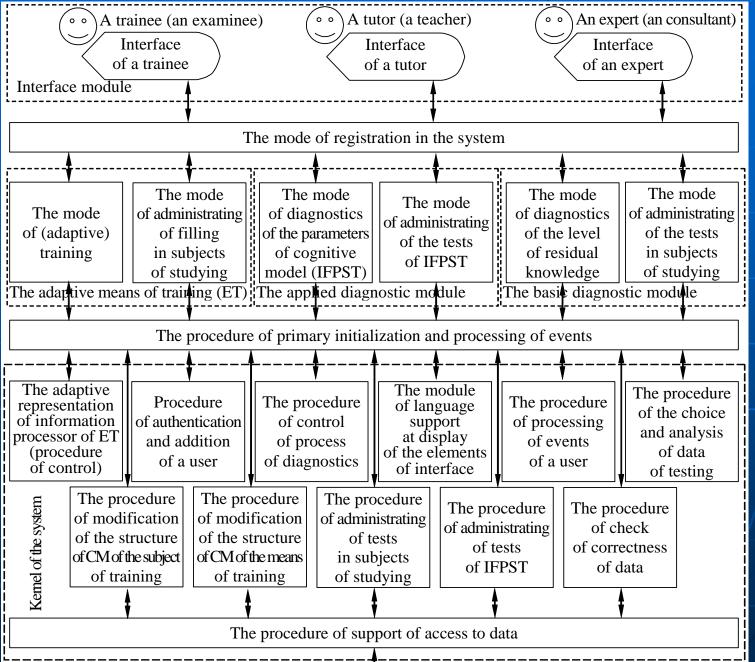

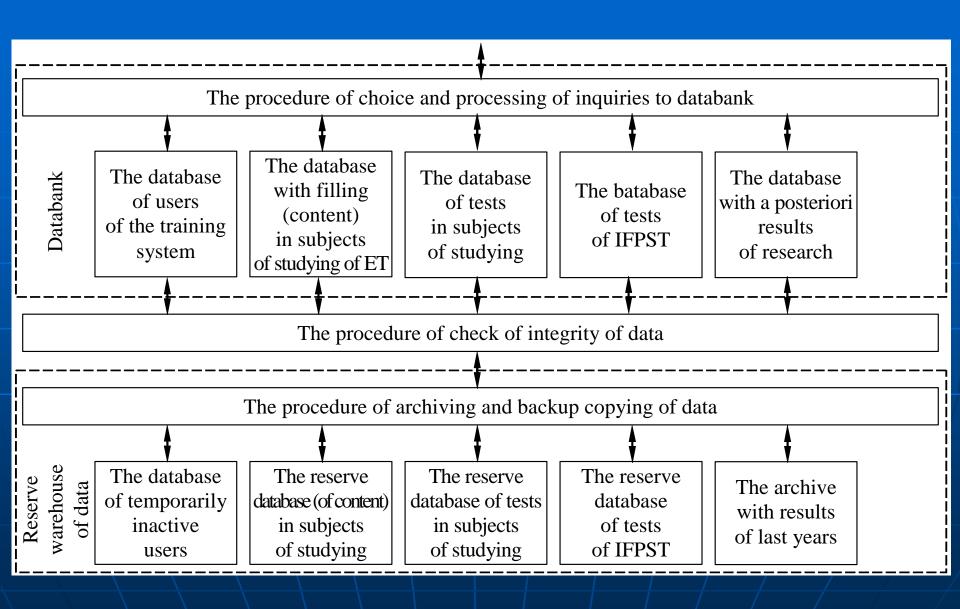

The structure of the cognitive model of chemical element (nuclear polymer) with four nucleus (plasmatic formations) in the view of the four-cognitive sphere

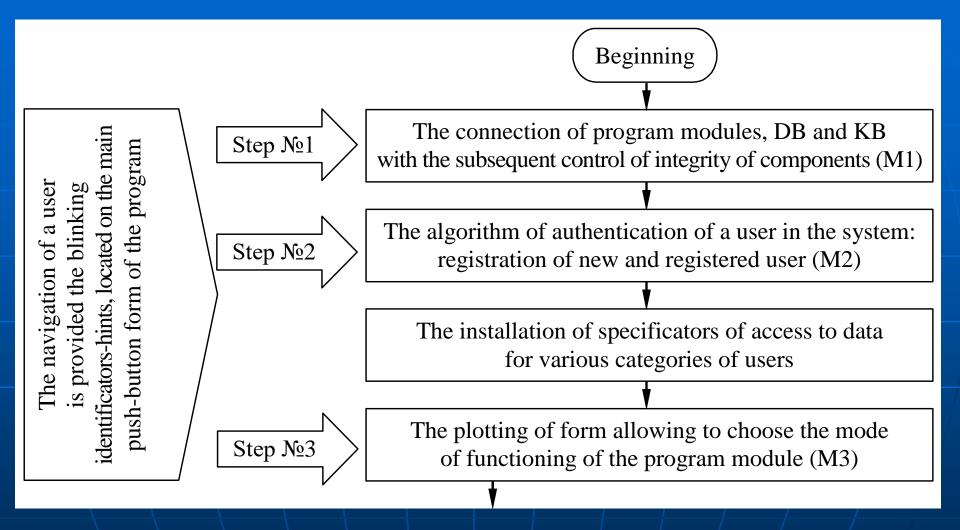

The structurally-functional scheme of the complex of programs for the automation of research tasks (1 from 2)

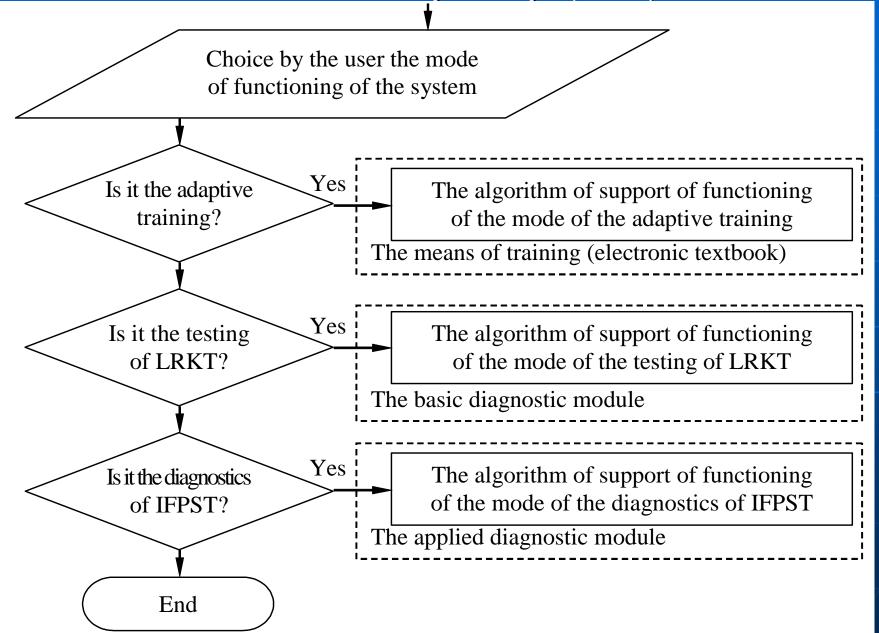

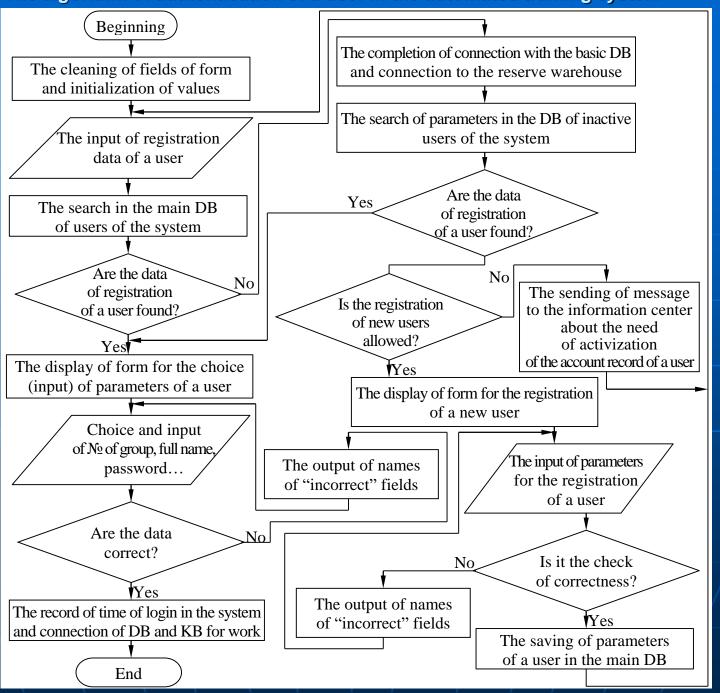

The algorithm of primary initialization of database and switching of the modes of functioning of the complex of programs for the automation of tasks of the system analysis (1 from 2)

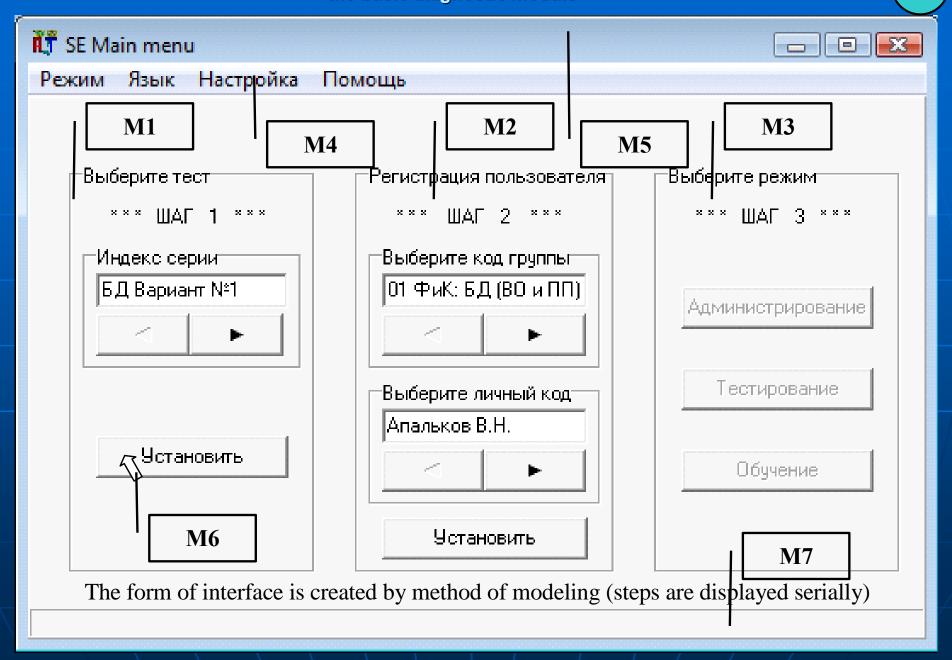

The algorithm of primary initialization of database and switching of the modes of functioning of the complex of programs for the automation of tasks of the system analysis (2 from 2)

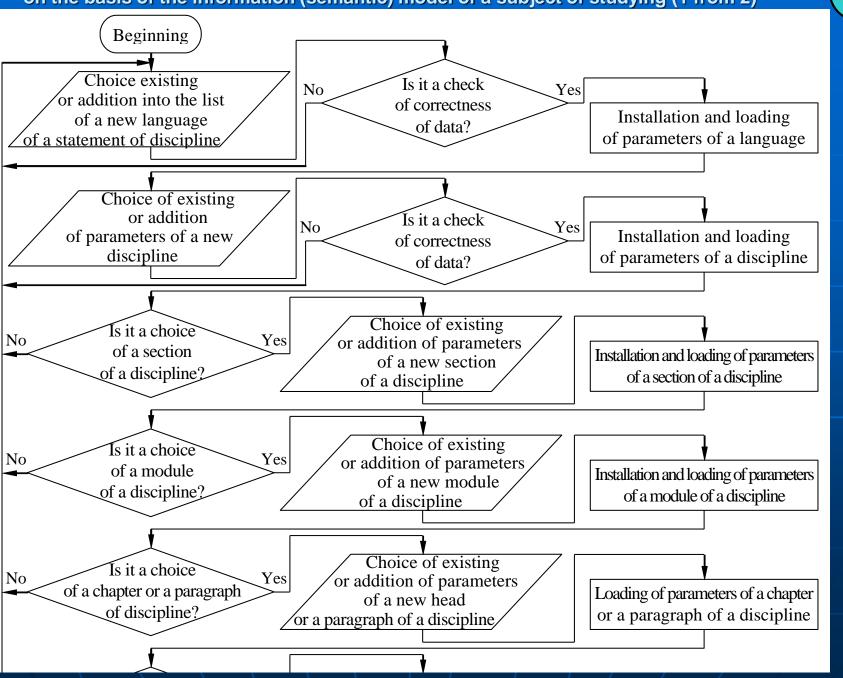

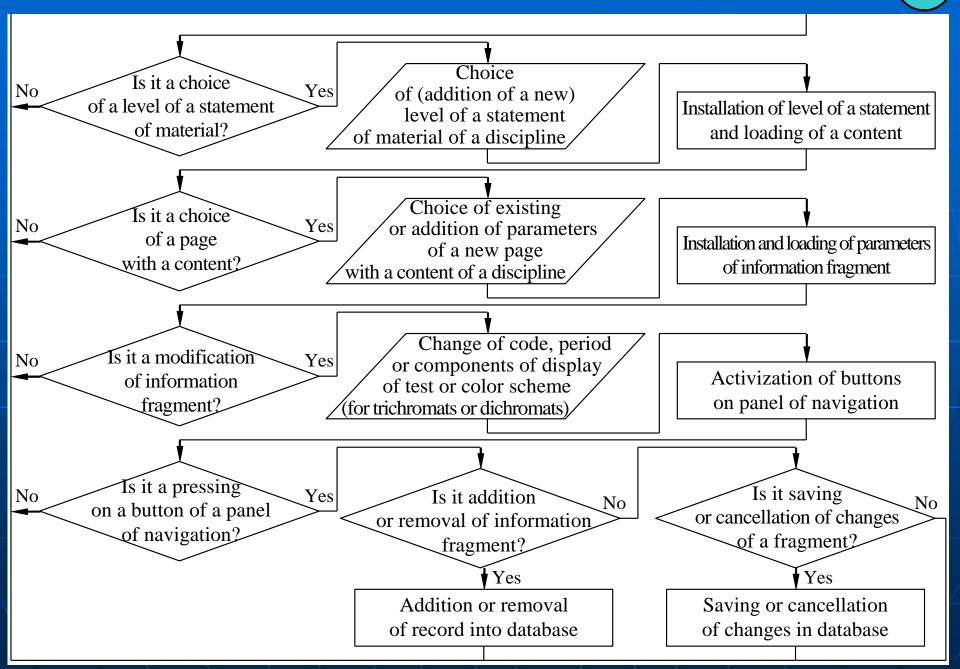

The algorithm of authentication of a user in the automated training system

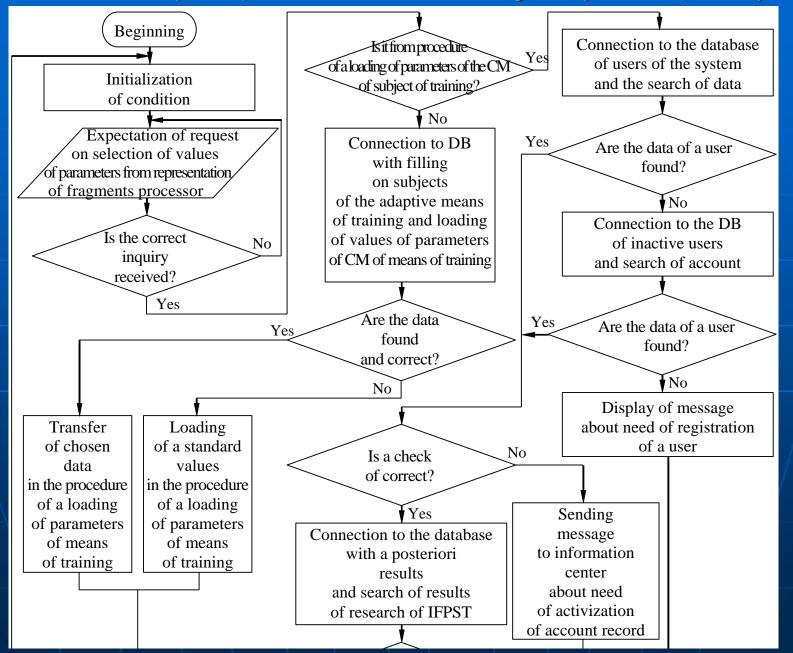

The algorithm of filling of content of the adaptive electronic textbook on the basis of the information (semantic) model of a subject of studying (1 from 2)

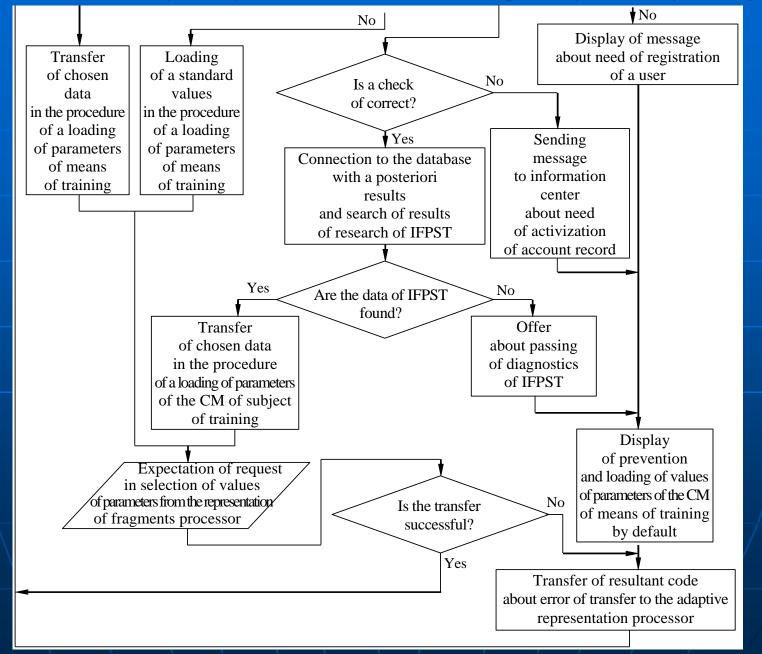

The algorithm of extraction of information fragments of the adaptive means of training (electronic textbook) on the basis of the adaptive representation of information fragments processor (1 from 2)

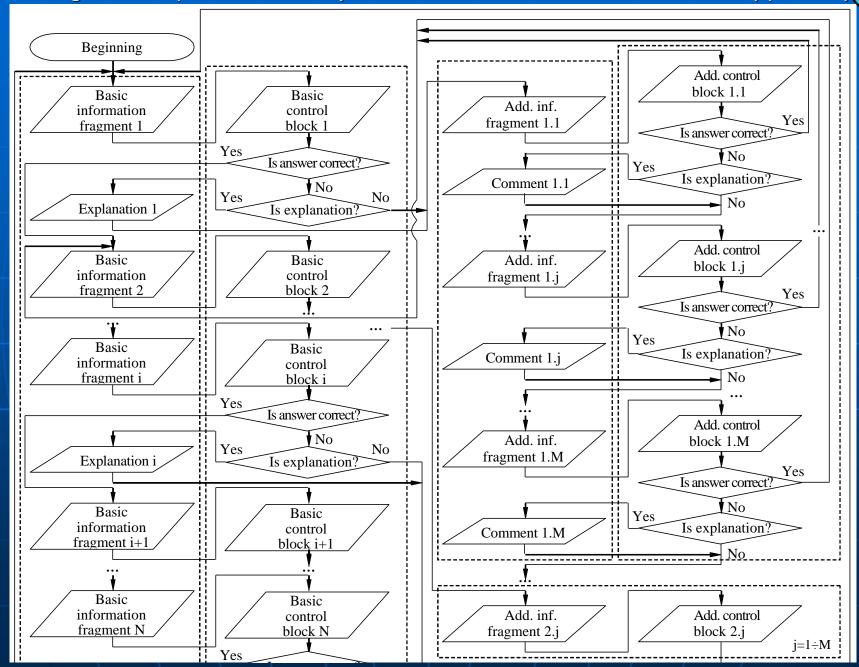

of the adaptive means of training (electronic textbook)

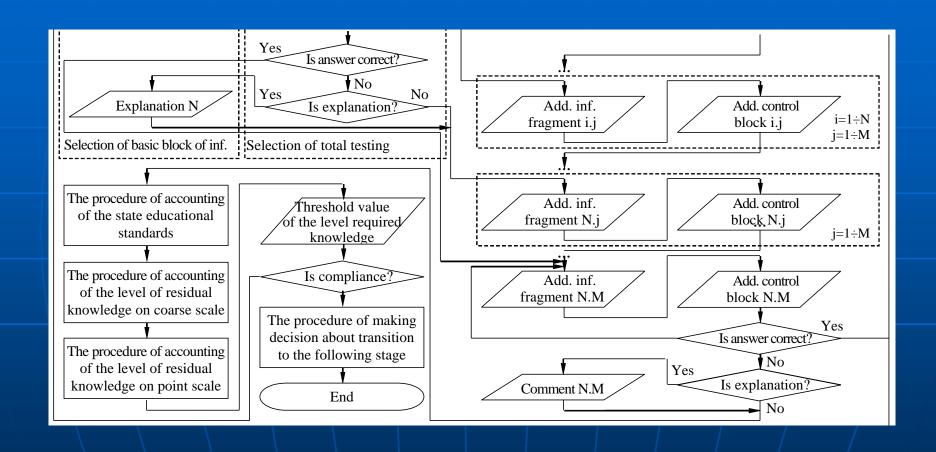

The algorithm of extraction of information fragments

on the basis of the adaptive representation of information fragments processor (2 from 2)

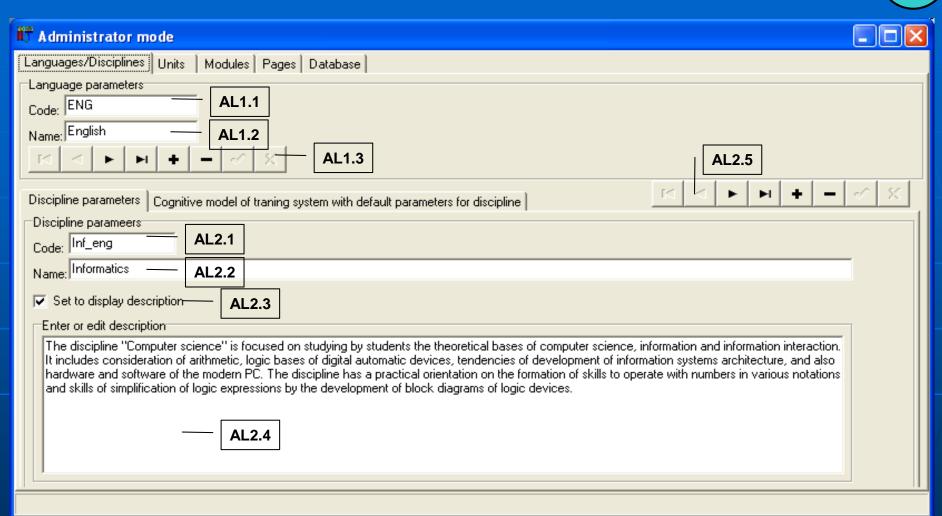

The algorithm of functioning of the adaptive electronic textbook jointly with the diagn. module (realized the more precise definition of the level of statem. of mat.) (1 from 2)

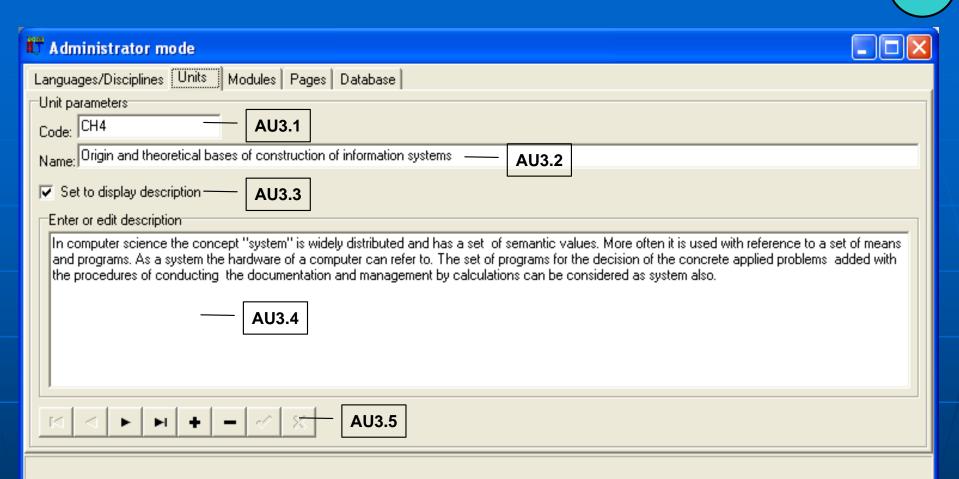

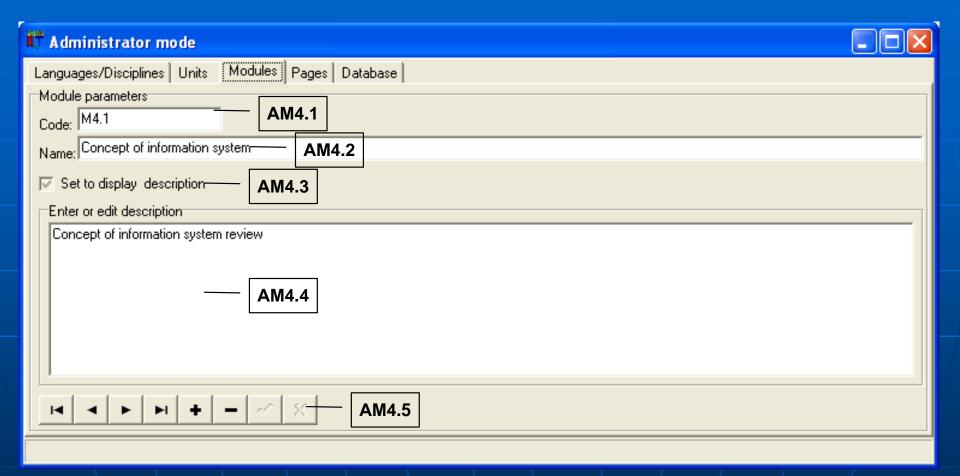

The interface of the adaptive electronic textbook in the mode of administrating: the review and modification of the parameters of the subjects of studying

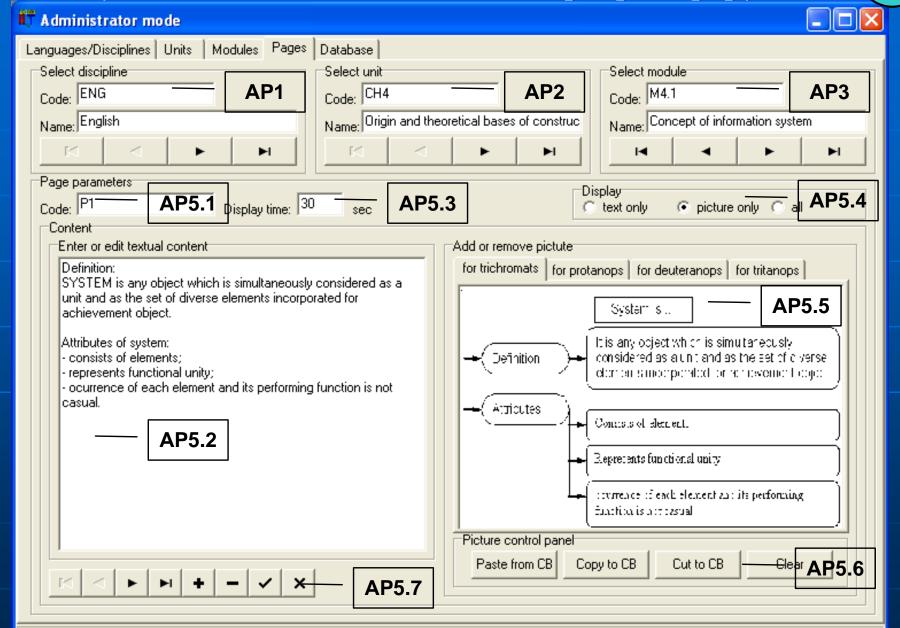

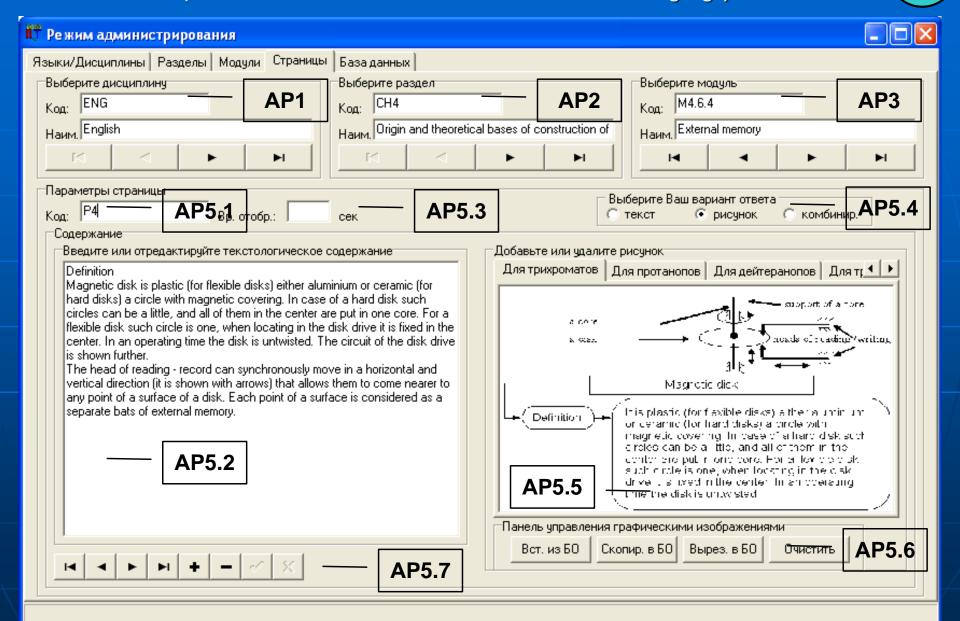

The interface of the adaptive electronic textbook in the mode of administrating: the review and modification of the parameters of page of module of unit of the subject of studying (the localization of interface in the international foreign English language)

4.7.4

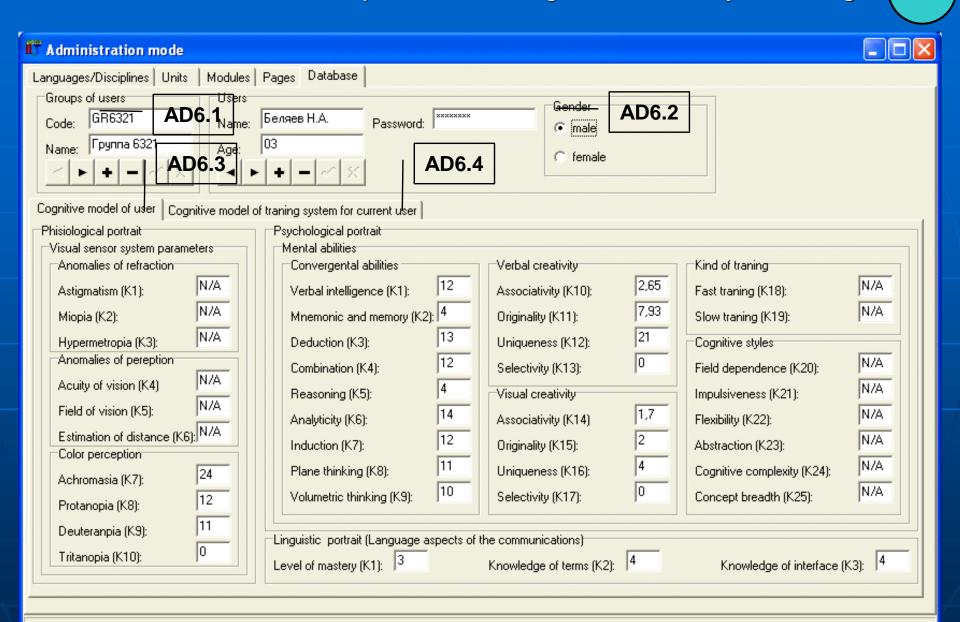

The interface of adaptive electronic textbook in the mode of administrating: the review and modification of the parameters of page of module of unit of the subject of studying (the localization of interface in the national Russian language)

4.7.5

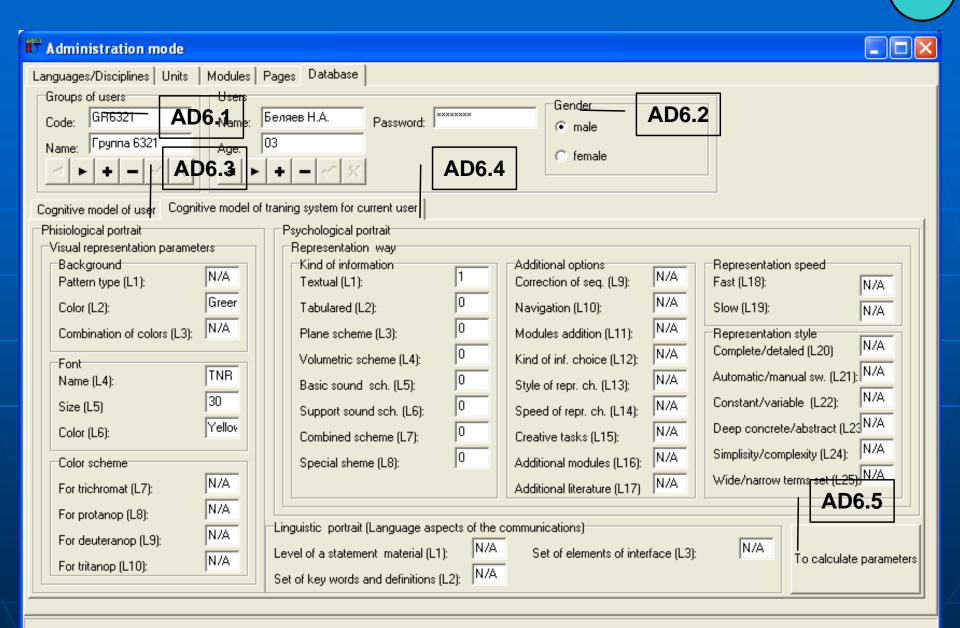

The administrating of database with the values of parameters of the param. cogn. models block: the review and modification of the parameters of the cognitive model of subject of training

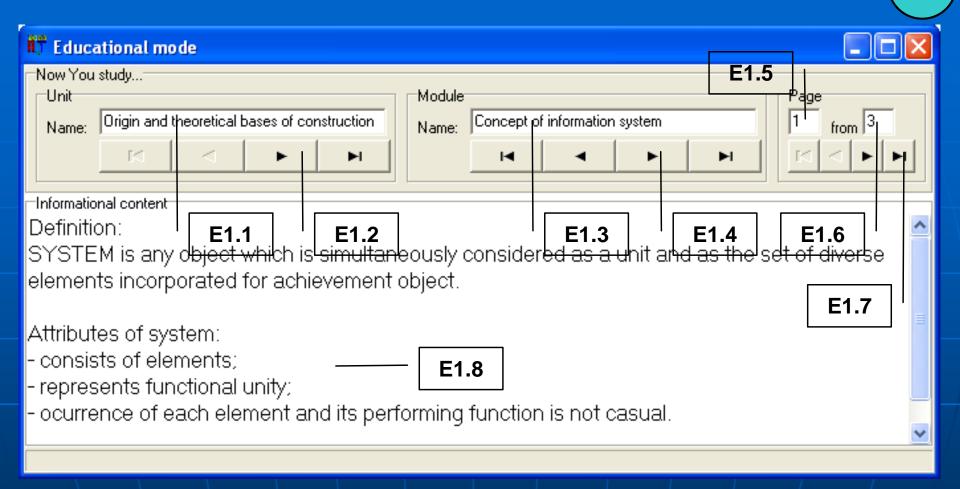

4.8.1

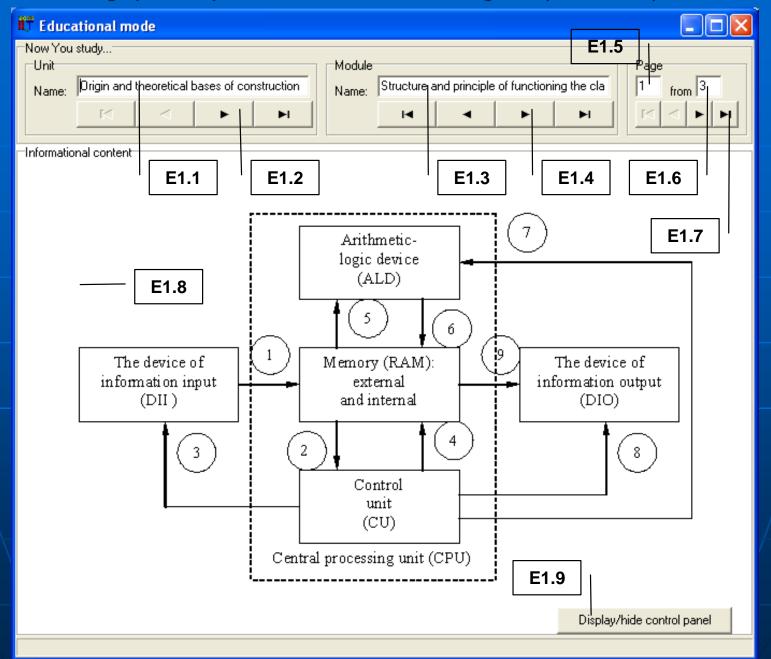

The administrating of database with the values of parameters of the param. cogn. models block: the review and modification of the parameters of the cognitive model of means of training

4.8.2

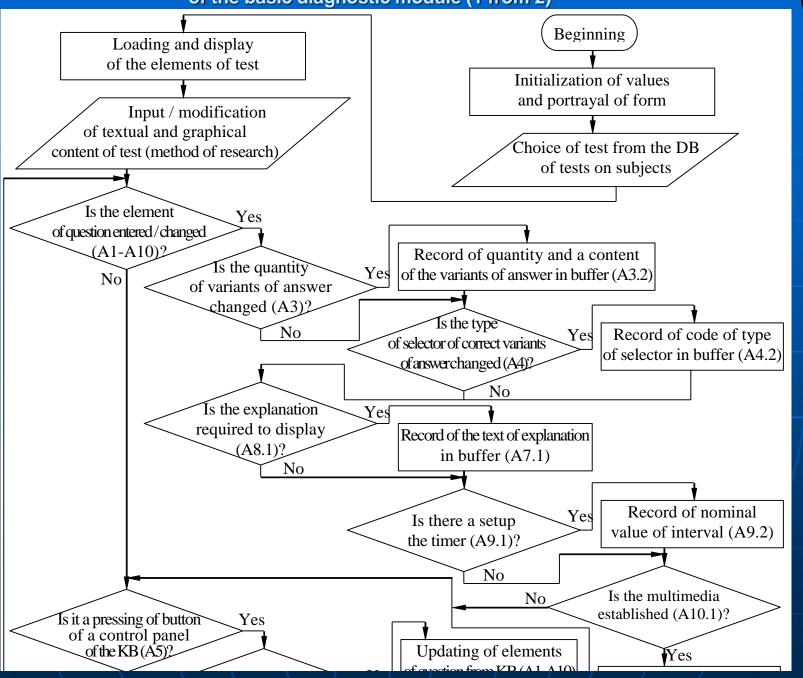

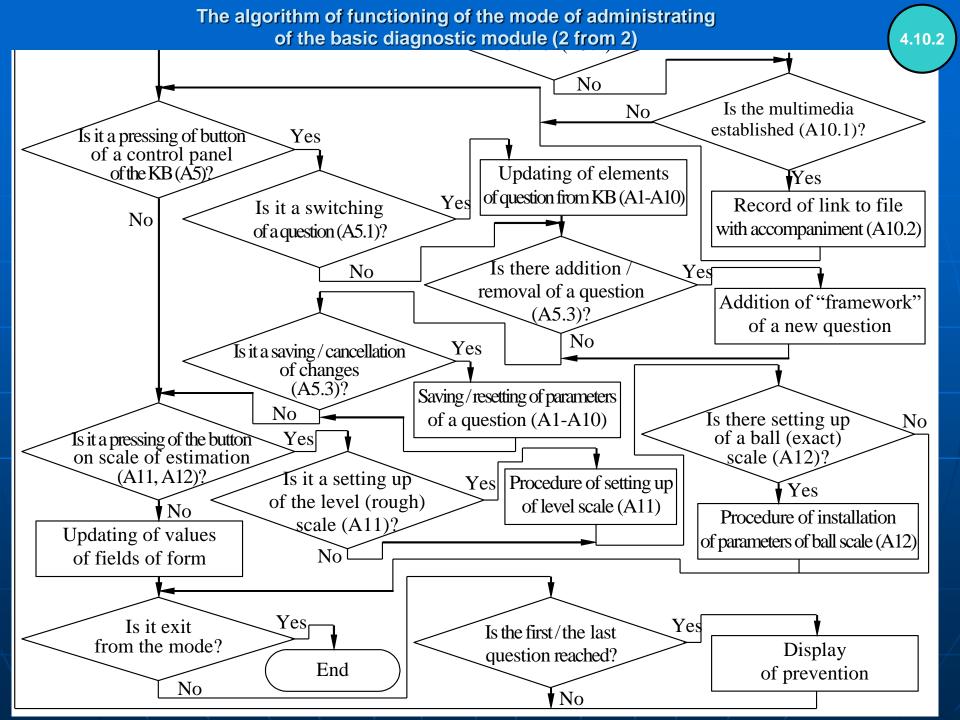

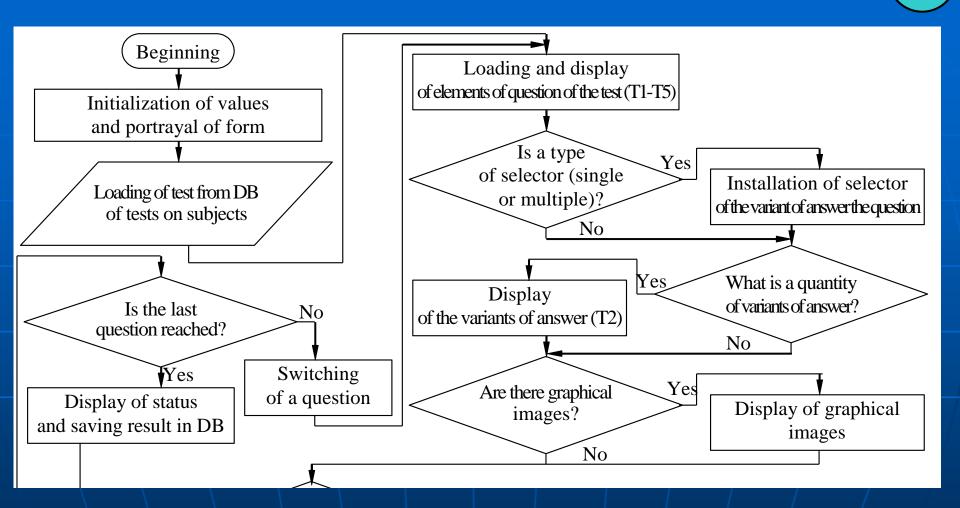

The interface of the adaptive electronic textbook in the mode of adaptive training: the graphical representation of information fragment (flat scheme)

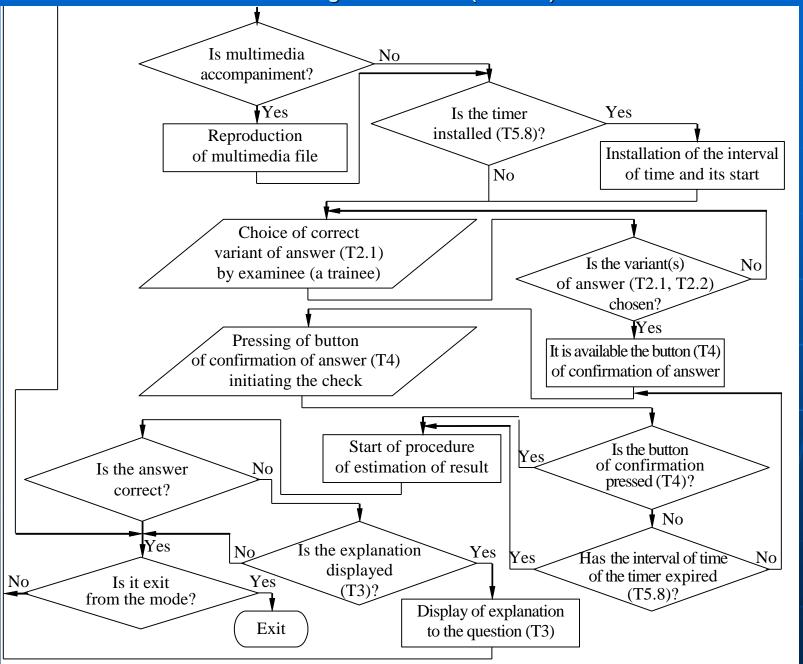

The algorithm of functioning of the mode of administrating of the basic diagnostic module (1 from 2)

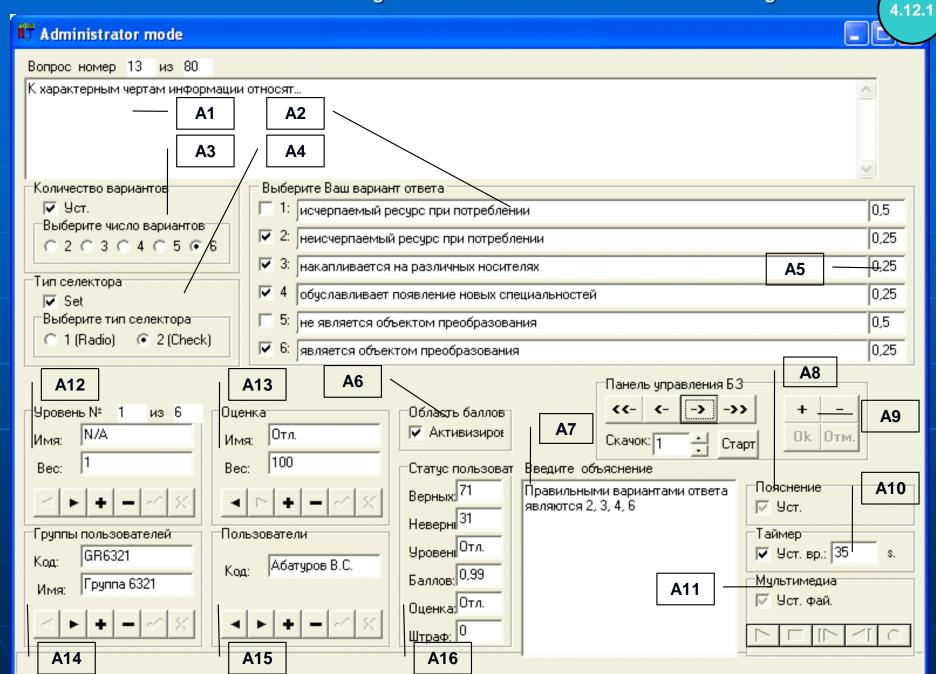

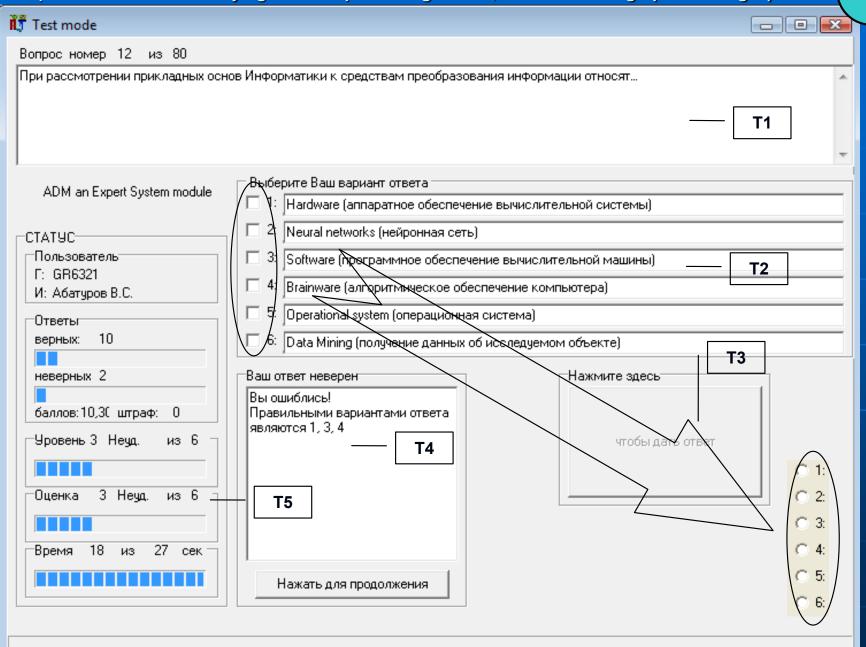

The algorithm of functioning of the mode of diagnostics in the form of testing of the basic diagnostic module (2 from 2)

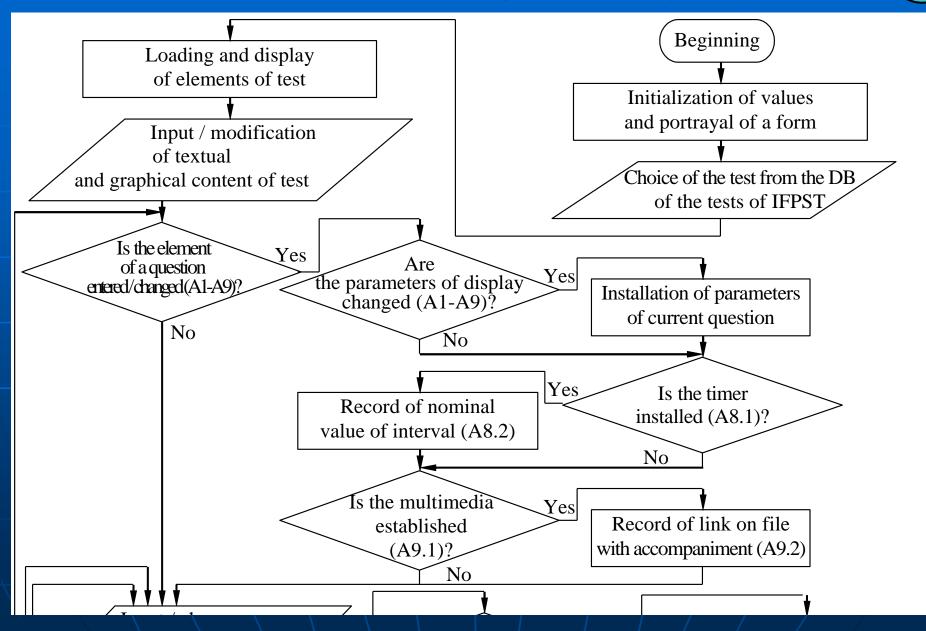

The interface of the basic diagnostic module in the mode of administrating

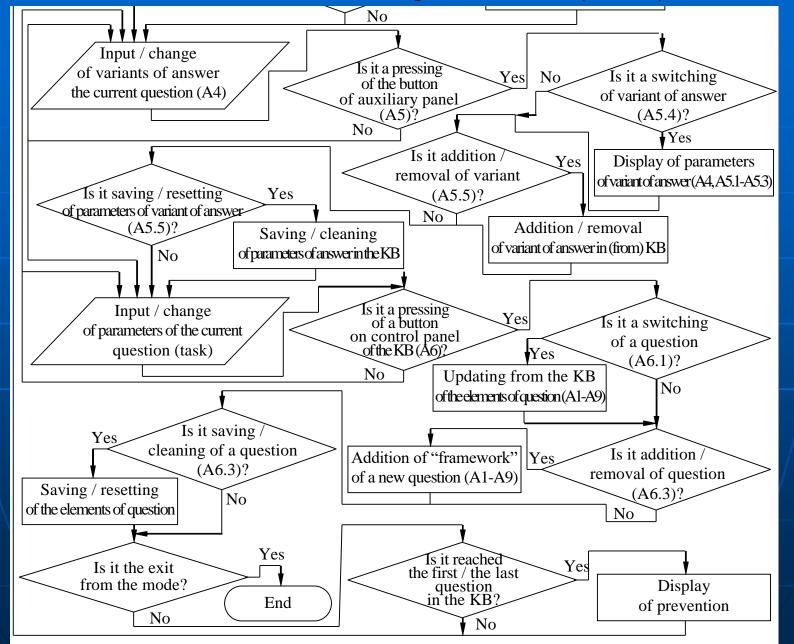

4.12.2

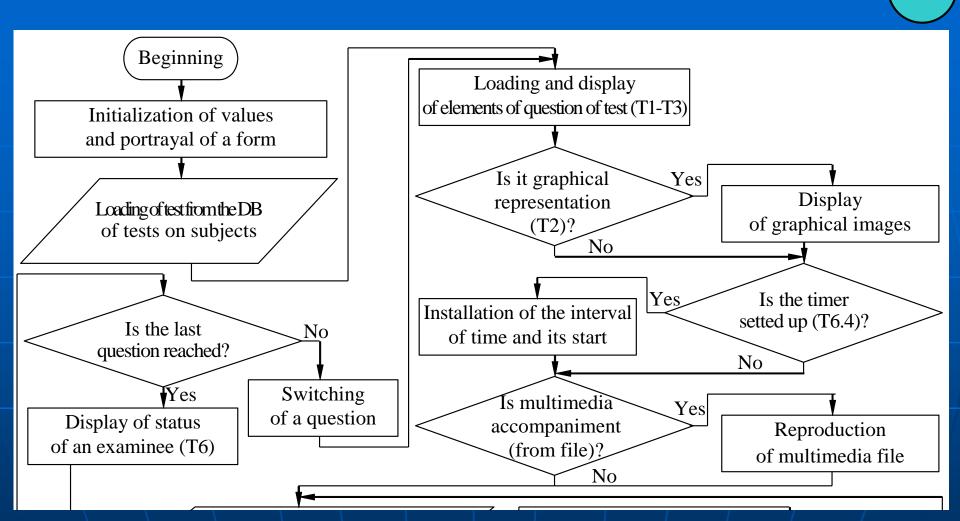

The algorithm of functioning of the applied diagnostic module in the mode of administrating of the question-answers structures of the methods of research of the individual features of the contingent of examinees (1 from 2)

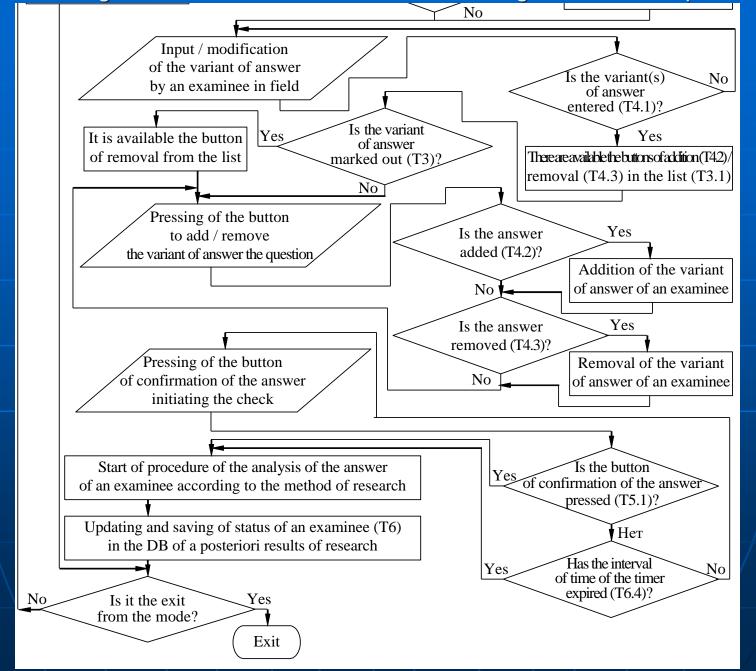

The algorithm of functioning of the applied diagnostic module in the mode of administrating of the question-answers structures of the methods of research of the individual features of the contingent of examinees (2 from 2)

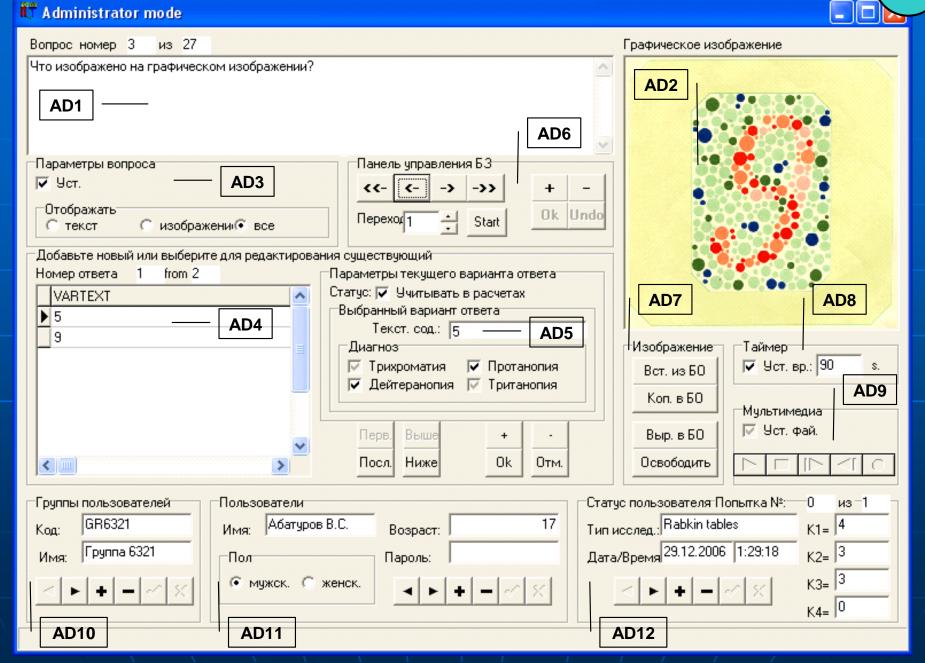

The algorithm of functioning of the applied diagnostic module in the mode of diagnostics of the individual features of the contingent of examinees (1 from 2)

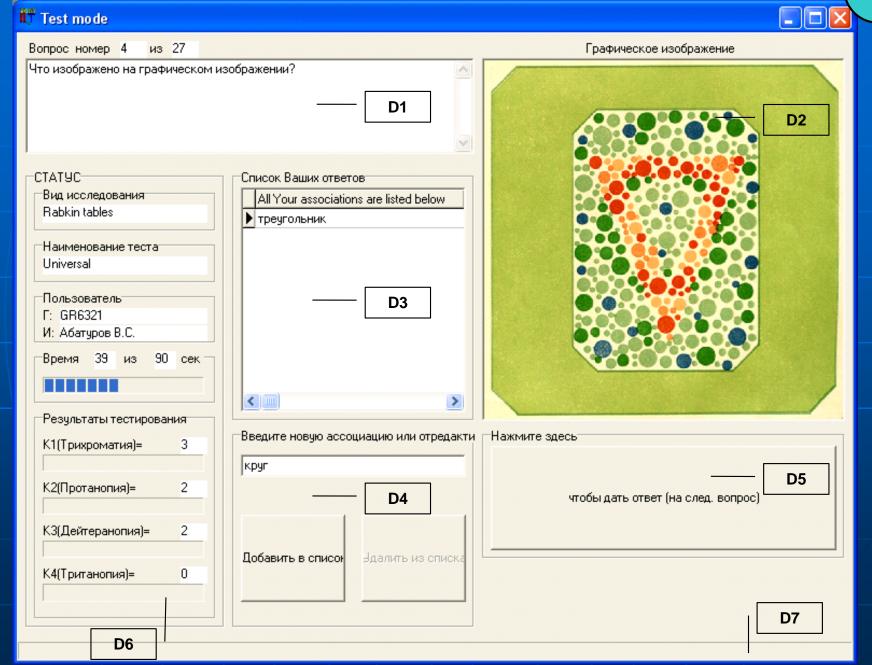

The algorithm of functioning of the applied diagnostic module in the mode of diagnostics of the individual features of the contingent of examinees (2 from 2)

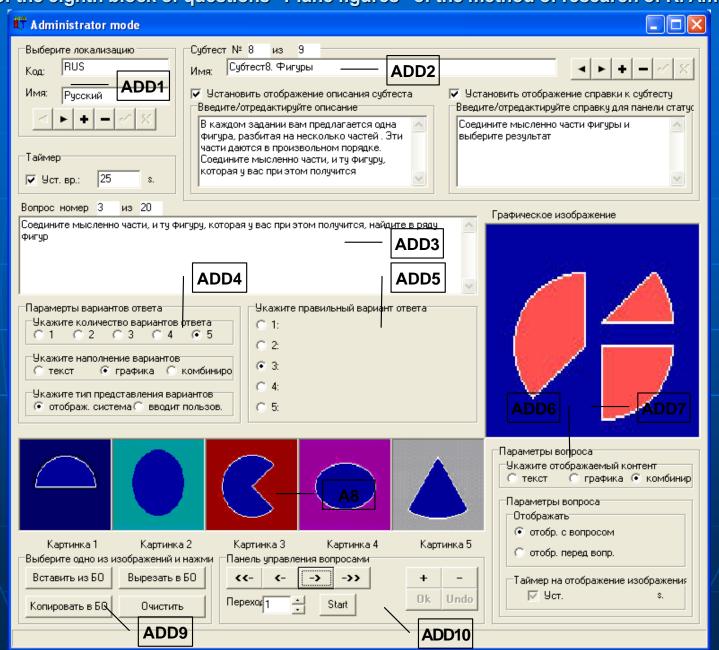

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the method of research of the color perception of Rabkin E.E 4.15.1

The interface of the applied diagnostic module in the mode of diagnostics of the color perception by means of the method of research of Rabkin E.B.

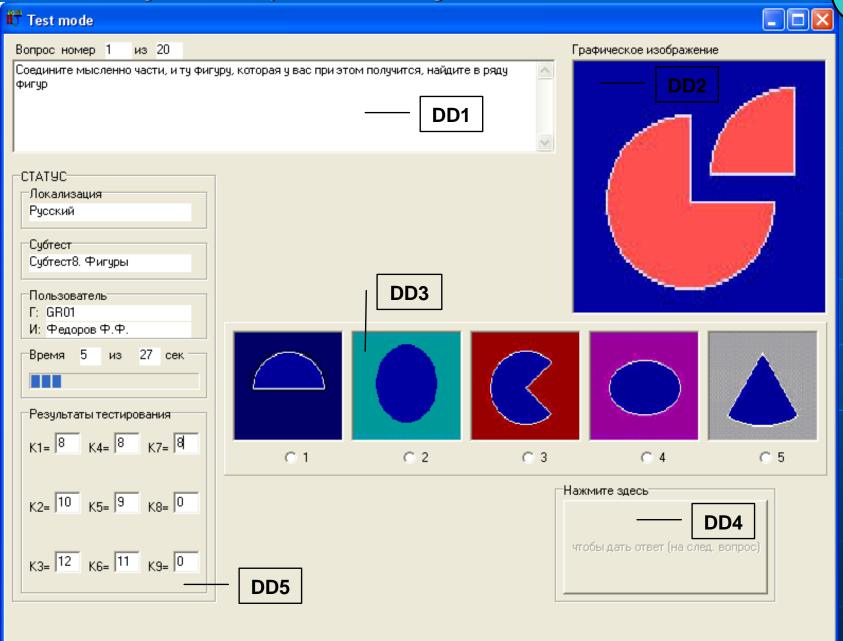

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the subtest of plane thinking by means of the eighth block of questions "Plane figures" of the method of research of R. Amthauer

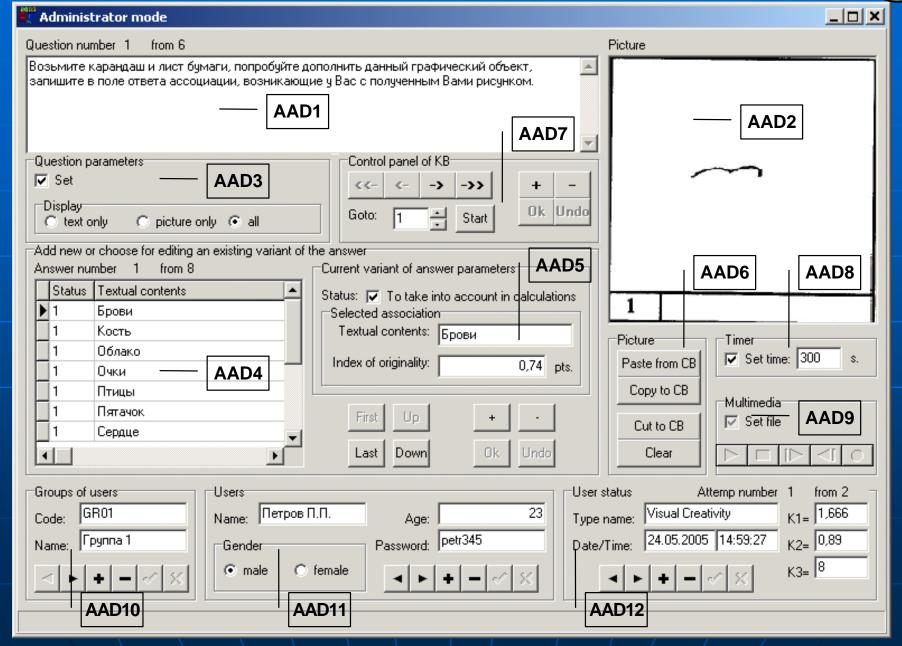

The interface of the applied diagnostic module in the mode of diagnostics of the plane thinking by means of the eighth block of questions "Plane figures" of the method of res. of R. Amthauer

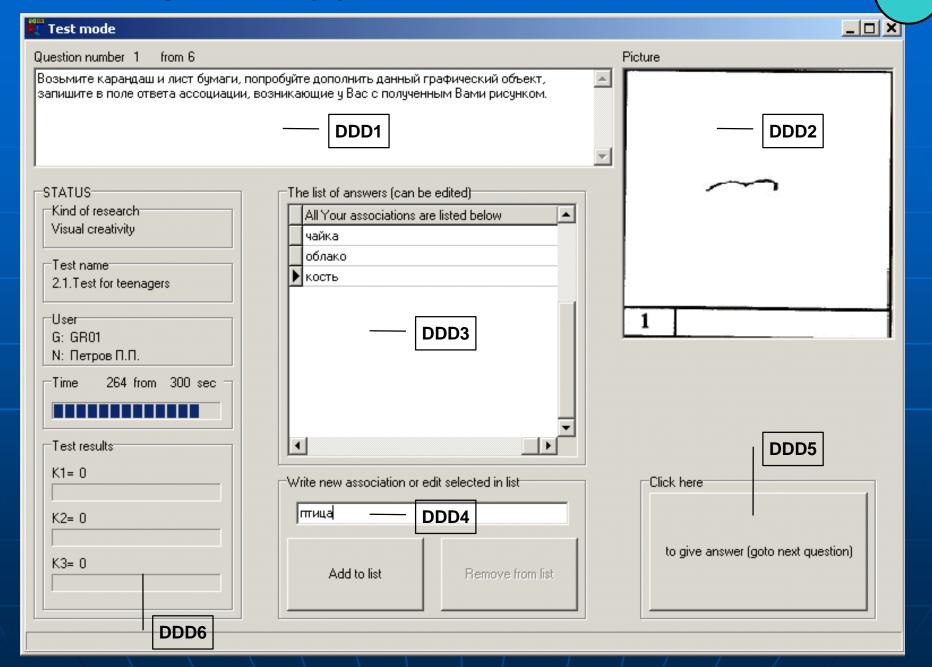

4.16.2

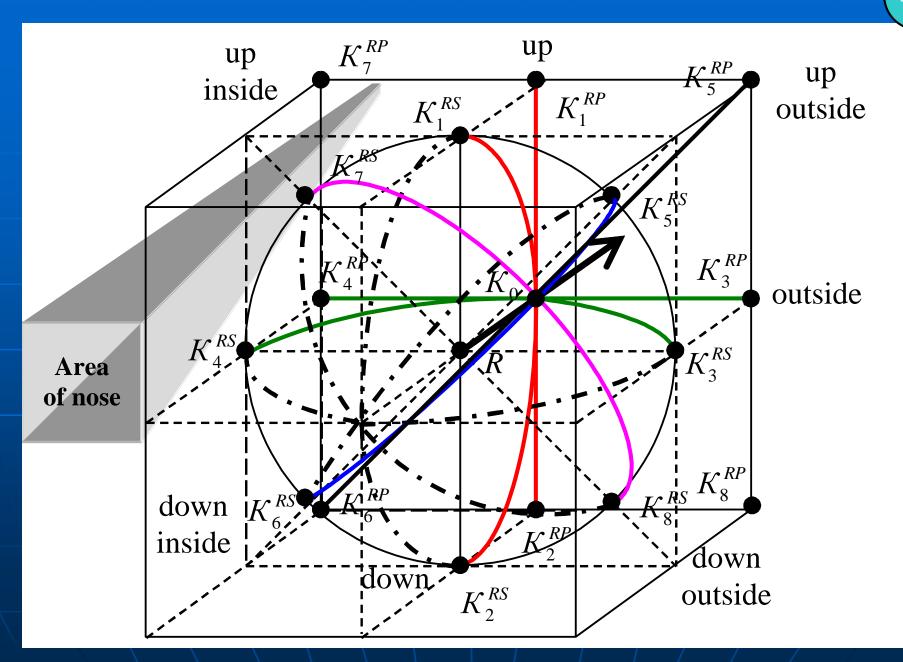

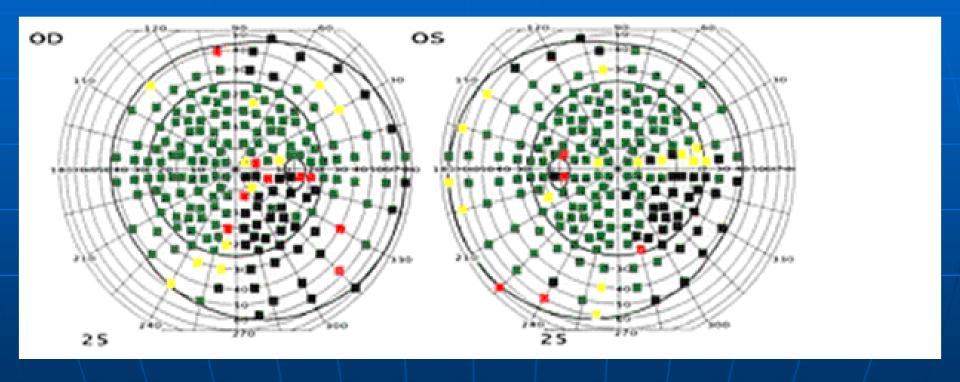

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the subtest of figurative creativity by means of the method of research of Torrance E.P.

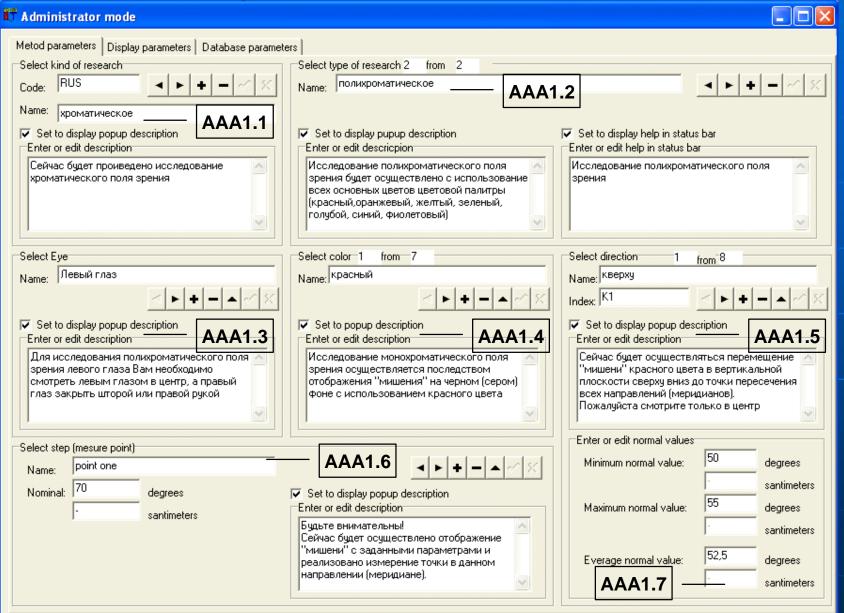

The interface of the applied diagnostic module in the mode of diagnostics of the figurative creativity by means of the method of research of Torrance E.P.

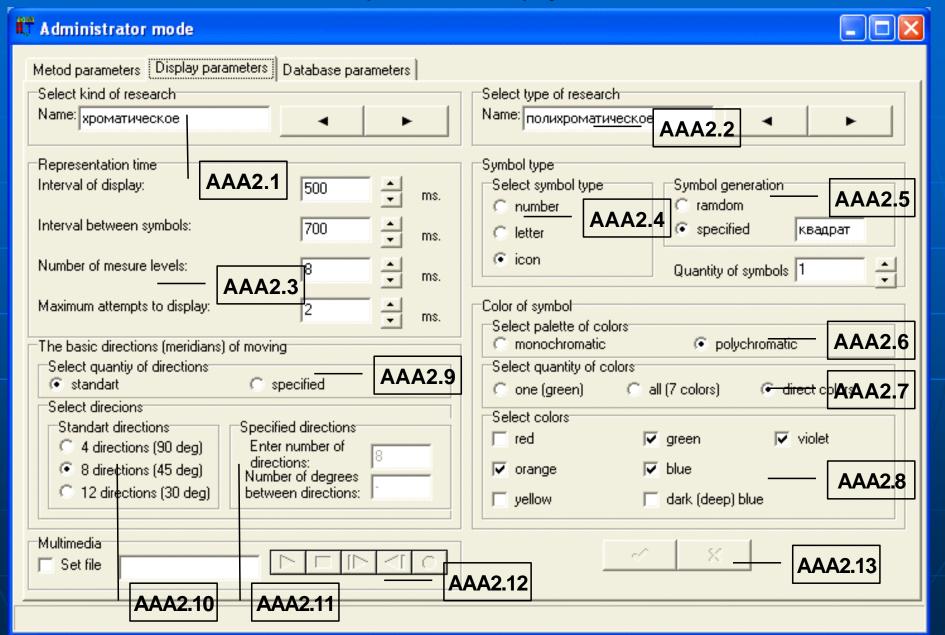

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the method of research of the achromatic and chromatic field of vision of examinee by means of the computer perimetry: the parameters of the method of research

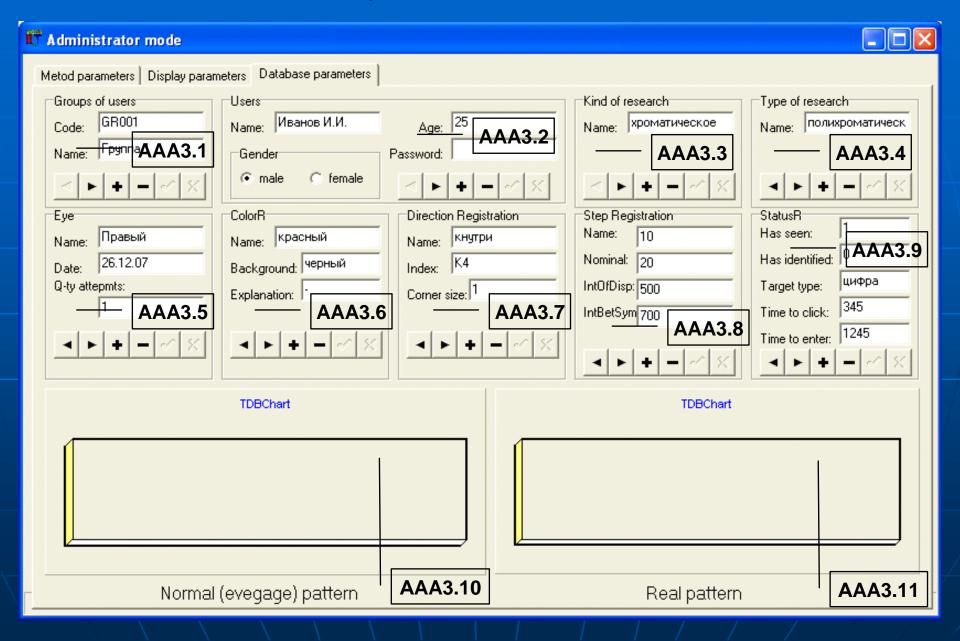

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the method of research of the achromatic and chromatic field of vision of examinee by means of the computer perimetry: the parameters of display

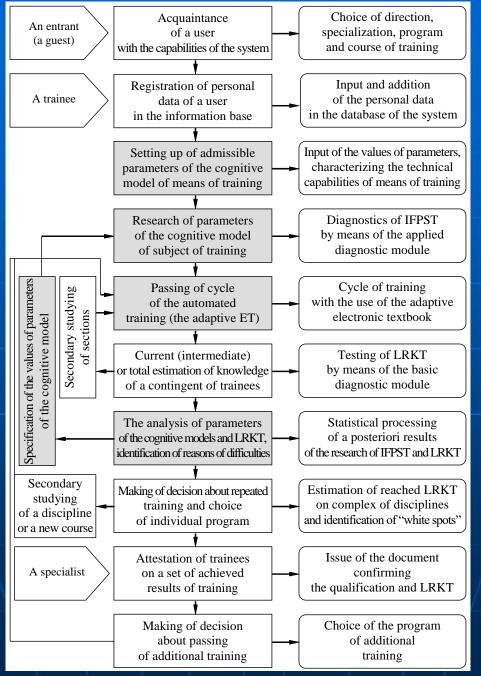

The interface of the applied diagnostic module in the mode of administrating of the question-answers structures of the method of research of the achromatic and chromatic field of vision of examinee by means of the computer perimetry: the parameters of database

The scheme, reflecting the sequence of actions for the support of researches of the cycle of adaptive automated training

The summary results of the mathematical processing of a posteriori data of the experiment (1 from 4)

Previously there was carried out the analysis of the dynamics of a change of the indicator of resultativity of training (LRKT) for the last three years and there was estimated the efficiency of the use of the CMT in the educational process (from 2004-2006 y.), the results of which are presented in the tab. 1.

1. As the result of the carried-out regression analysis the received values of coefficient of multiple correlation (CMC) and coefficient of multiple determination (CMD) demonstrate, that minimum 38,9% (at the reduced set of predictors and the rough scale of estimation on the basis of the sum of the correct answers the questions) and maximum 59,0% (at the full set of predictors and the exact scale of estimation on the basis of the sum of the gained points) of dispersion of dependent variable Y (estimation of the LRKT) is defined by the variation of the values of the reduced and full set of independent variables of the linear regression model $Y(K_i)$. 2. As predictors in the received linear multiple regression model is accepted the reduced (Age, K_7 , K_8 , K_9 , K_{14} , K_{15} , K_{16} , K_{17} , K_{18} , K_{19} , K_{20} , K_{21} , K_{22} , K_{23} , K_{24} , K_{25} , K_{27} , K_{28} , K_{29} , K_{45}) and the full set (Age, RU, LIT, LG, HIS, GEO, BIO, ALG, GEOM, FIZ, CHE, SCH, AST, K₇, K₈, K₉, K_{14} , K_{15} , K_{16} , K_{17} , K_{18} , K_{19} , K_{20} , K_{21} , K_{22} , K_{23} , K_{24} , K_{25} , K_{27} , K_{28} , K_{29} , K_{45} , L_{31N} , L_{36N} , L_{37} , L_{38N}) of independent variables (predictors), and as the factor (dependent variable) directly supports the resultativity of technological process of controlled formation of knowledge Y (Y_2 – the estimation of LRKT on the rough scale on the basis of the sum of the correct answers the questions and Y_4 —the estimation of LRKT on the exact scale on the basis of the sum of the gained points for each correct variant of answer the question).

During the regression analysis the equations of multiple regression are received: $Y_2 = 2.545 - 0.012 \text{Age} + 0.031 \text{K}_7 + 0.020 \text{K}_8 - 0.029 \text{K}_9 + 0.057 \text{K}_{14} - 0.017 \text{K}_{15} - 0.019 \text{K}_{16} - 0.019 \text{$ $-0.017K_{17} + 0.038K_{18} + 0.012K_{19} + 0.015K_{20} + 0.030K_{21} - 0.003K_{22} - 0.031K_{23} + 0.004K_{24} - 0.003K_{22} - 0.003K_{23} + 0.004K_{24} - 0.003K_{22} - 0.003K_{23} + 0.004K_{24} - 0.003K_{24} -0.005K_{25}+0.075K_{27}-0.035K_{28}+0.006K_{29}+0.037K_{45}$, CMC=0.389, CMD=0.151. $Y_4 = 4,924 - 0,108$ Age+0,028K₇+0,005K₈-0,025K₉+0,016K₁₄-0,038K₁₅-0,016K₁₆-0 $-0.003K_{17}+0.038K_{18}-0.015K_{19}+0.021K_{20}+0.068K_{21}-0.019K_{22}-0.040K_{23}-0.015K_{24}+$ $+0.008K_{25}+0.090K_{27}-0.096K_{28}+0.020K_{29}+0.075K_{45}$, CMC=0,509, CMD=0,259. In the equations of multiple regression the following designations are used (see the slide 3.1 – the CM of subject of training and see the slide 3.2 – the CM of means of training): Age – age, RU – estimation of LRKT in Russian language, LIT – estimation of LRKT in literature, LG – estimation of LRKT in foreign (English) language, HIS – estimation of LRKT in history, GEO – estimation of LRKT in geography, BIO – estimation of LRKT in biology, ALG – estimation of LRKT in algebra, GEOM – estimation of LRKT in geometry, FIZ – estimation of LRKT in physics, CHE – estimation of LRKT in chemistry, SCH – estimation of LRKT in drawing, AST – estimation of LRKT in astronomy, $K_7 = \Pi^1_7$ – achromasia, $K_8^1 = \Pi_8^1 - \text{protanopia}, K_9^1 = \Pi_9^1 - \text{deuteranopia}, K_{10}^1 = \Pi_{10}^1 - \text{tritanopia},$ $K_{14}^{1}=\Pi_{14}^{1}$ – verbalization (logical selection), $K_{15}^{1}=\Pi_{15}^{1}$ – deductive generalization (search of general signs), $K_{16}^1 = \Pi_{16}^1 - associative$ combinatory, $K_{17}^1 = \Pi_{17}^1 - classification and reasoning,$ $K_{18}^1 = \Pi_{18}^1 - \text{the mathematical analysis (arithmetic abilities)}, <math>K_{19}^1 = \Pi_{19}^1 - \text{numerical induction}$ (recombining of numbers), $K_{20}^1 = \Pi_{20}^1 - \text{mnemonics}$ and memory (storing), $K_{21}^1 = \Pi_{21}^1 - \text{plane}$ thinking, $K_{22}^1 = \Pi_{22}^1 - \text{volumetric imagination (volumetric thinking)}$, $K_{23}^1 = \Pi_{23}^1 - \text{verbal}$ associativity, $K_{24}^1 = \Pi_{24}^1$ - verbal originality, $K_{25}^1 = \Pi_{25}^1$ - verbal uniqueness, $K_{26}^1 = \Pi_{26}^1 - \text{verbal selectivity}, \quad K_{27}^1 = \Pi_{27}^1 - \text{figurative associativity}, \quad K_{28}^1 = \Pi_{28}^1 - \text{figurative}$ originality, $K_{29}^1 = \Pi_{29}^1$ - figurative uniqueness, $K_{30}^1 = \Pi_{30}^1$ - figurative selectivity, $K_{45}^1 = \Pi_{21}^1$ level of proficiency in language of statement, $L2_{31N}=\Pi^2_2$ – color of background, $L_{36N}=\Pi^2_4$ – set of font, $L_{37}=\Pi^2_5$ – size of pointtype of symbol $L_{38N}=\Pi^2_6$ – color of symbol (the specified and other parameters of the parametrical CM block are located in the database with a posteriori results of research of LRKT and IFPST).

The results of the discriminant analysis (1 from 2): own values for the canonical discriminant functions

The discriminant analysis allows to receive the own values of canonical functions and the chart of relative arrangement of the centroids of the classes, selected on the indicator of resultativity of the training, allowing to provide the evident interpretation of the differences between the classes of excellent, good, mediocre and poor pupils on the basis of a set of the values of parameters in the parametrical CM block (the CM of subject of training and the CM of means of training), which essential for the analysis of efficiency of a formation of knowledge of trainees in the IEE of the ART.

Table 2

The reduced set of independent The reduced set of independent

	The reduce	a set of inc	t		The reduced set of independent					
variables K _i and dependent variable Y ₂						variables K_i and dependent variable Y_4				
Function Own Share Saved-up of dispersion dispersion Correlation						Function	Own value	Share of dispersion	Saved-up dispersion	Correlation
1	0,183	51,6	51,6	0,393		1	0,414	76,6	76,6	0,541
2	0,131	37,2	88,8	0,341		2	0,082	15,3	91,9	0,276
3	0,040	11,2	100,0	0,196		3	0,044	8,1	100,0	0,205
The full set of independent							The full s	set of inde	pendent	

variables K_i and dependent variable Y_2

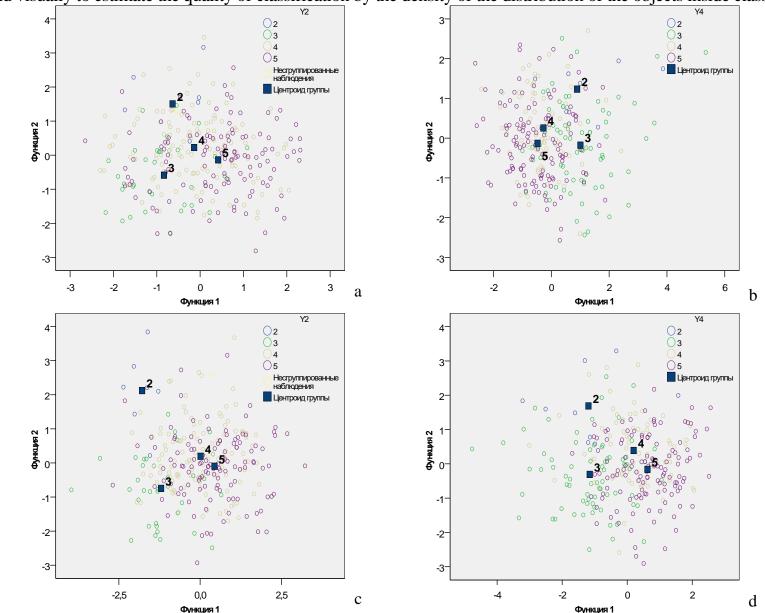

variables K_i and dependent variable Y_4

Function	Own	Share	Saved-up	Correlation	Function	Own	Share	Saved-up	Correlation
	value	of dispersion	dispersion			value	of dispersion	dispersion	
1	0,350	52,9	52,9	0,509	1	0,582	67,8	67,8	0,607
2	0,206	31,1	84,0	0,413	2	0,169	19,6	87,4	0,380
3	0,106	16,0	100,0	0,309	3	0,108	12,6	100,0	0,313

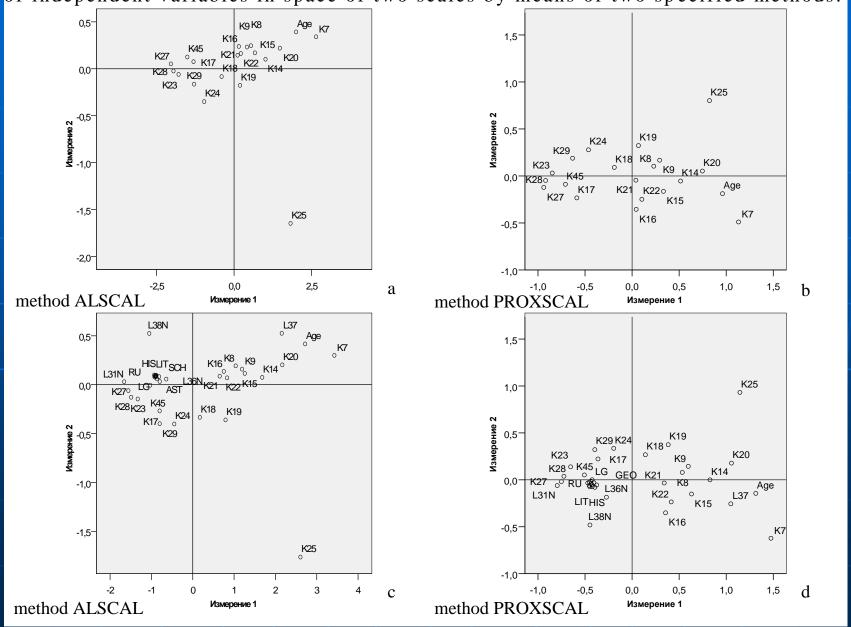

The informativity of the presented canonical functions is approximately equal.

The results of the discriminant analysis (2 from 2): the position of centroids of classes in the space of two discriminant functions

The graphical interpretation allows to analyze the received canonical functions and visually to estimate the quality of classification by the density of the distribution of the objects inside class.

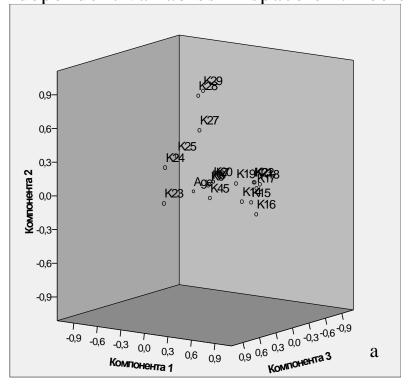

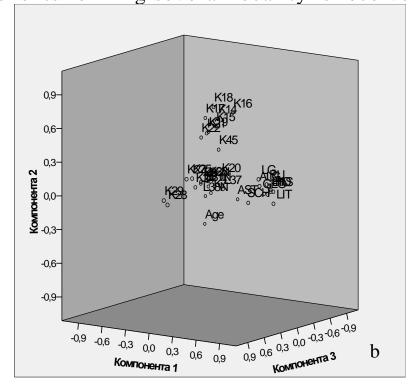

Multidimencional scaling allowed to reflect the geometrical place of points of the reduced (a – method ALSCAL, c – method PROXSCAL) and the full set (b – method ALSCAL, d – method PROXSCAL) of independent variables in space of two scales by means of two specified methods.

The results of the factorial analysis

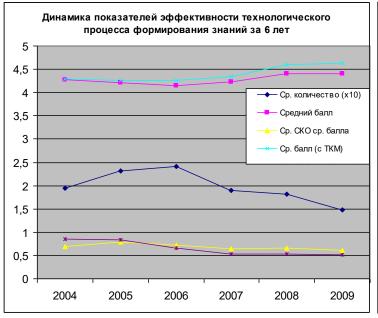

The geometrical location of the reduced set (a) and the full set (b) of independent variables in space of three components forming several locality is received.

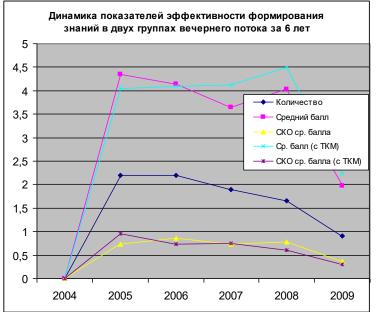

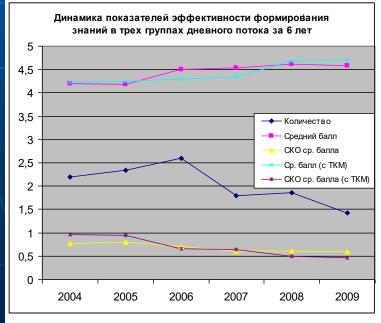

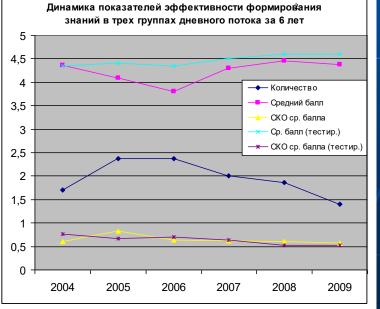

The dynamics of the indicators of efficiency (resultativity) of the technological process of controlled formation of knowledge of trainees (1 from 2)

The dynamics of indicators of resultativity of training for 6 years (2004-2009 y.) is presented.

The statistical analysis of a posteriori data received at the practical use of results of research in the learning process of "The Saint-Petersburg state electrotechnical university "LETI"" and "The international banking institute" allow to draw the following conclusions:

- the effective use of CMT in the automated IEE assumes the modification of the IEE of the ART and the modernization of electronic means of training and TMM of different appointment;
- the degree of influence of the parameters of CM on efficiency (resultativity) of process of training (formation of knowledge) depends on the contingent of trainees and has individual character;
- the increase of efficiency of formation of knowledge of trainees with the use of CMT is defined by the opportunities of means of IEE, the content of ET containing the structured information on the cycle of disciplines is adequate to the purposes of training, varied according to the algorithms in the basis of various components, techniques, learning plans and working programs.

In my scientific works and the next report on SRW "The research of the information environment of the automated training with properties of adaptation based on the cognitive models and the financial analysis of the organization by means of cognitive modeling technology" for 2006-2008 y., which is carried out in the process of writing of dissertation, on fact of the difficult theoretical and practical scientific-technical work:

- the CMT for the system analysis of IEE and the increase of efficiency of the system of ART is created—this dissertation;
- the aggregate of CMT for the financial analysis of organizational structure is developed the dissertation on spec. 08.00.10 "Finance, monetary circulation and credit" is formed

Part III. The answers the questions of the foreign and national of member of "The dissertation council" on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

Reporter (applicant): the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

The question of the foreign member of "The dissertation council" 1.1.

"The content of question"

The author of question:

the head of chair "The name of chair" of the faculty "The name of faculty" of "The Lappeenranta technological university" (The republic of Finland, Lappeenranta city), d.t.s., prof. *John Johnson*.

The question of the foreign member of "The dissertation council" 2.1. "The content of question"

The author of question:

the head of chair "The name of chair" of the faculty "The name of faculty" of "The Helsinki university" (The republic of Finland, Helsinki city), d.t.s., prof. *John Johnson*.

The question of the national member of "The dissertation council" 3.1. "The content of question"

The author of question:

the head of chair "The name of chair" of the faculty of "The name of faculty" of "The Saint-Petersburg state university" (The RF, Saint-Petersburg city), d.t.s., prof. *Ivanov Ivan Ivanovich*.

The question of the national member of "The dissertation council" 4.1.

"The content of question"

The author of question:

the head of chair "The name of chair" of the faculty of "The name of faculty" of "The Saint-Petersburg state university" (The RF, Saint-Petersburg city), d.t.s., prof. *Petrov Petr Petrovich*.

Part IV. The performances of the members "The dissertation council", the representative of opposing (leading) organization, the official opponents and the scientific supervisor on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

Part IV.1. The performance of the members of "The dissertation council" on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

Part IV.2. The performance of the representative of opposing (leading) organization on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

The representative of opposing (leading) organization: the head of chair "The name of chair" of the faculty "The name of faculty" of "The name of opposing (leading) organization" (The country, city), d.t.s., prof. *Ivanov Ivan Ivanovich*.

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

Part IV.3. The performances of official opponents on dissertation

"The environment of automated training with properties of adaptation based on cognitive models"

on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

The first official opponent:

the head of chair "The name of chair" of the faculty "The name of faculty" of "The opposing (leading) organization" (The country, city), d.t.s., prof. *Ivanov Ivan Ivanovich*.

The second official opponent:

the head of chair "The name of chair" of the faculty "The name of faculty" of "The opposing (leading) organization" (The country, city), d.t.s., prof. *Ivanov Ivan Ivanovich*.

Part IV.4. The performance of scientific supervisor on dissertation

"The environment of automated training with properties of adaptation based on cognitive models"

on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

<u>The scientific supervisor:</u> the prof. of chair "Information system" of "The SPbSU", the member of "The American mathematical society", d.ph.-m.s., prof. *Kvitko Alexander Nikolaevich*.

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

Part V. The vote of the members of "The dissertation council" on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences

on spec. 05.13.01 – "The system analysis, control and information processing"

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

The results of vote of the members of "The dissertation council" on the question of assignment of scientific degree: "Yes" – 00, "No" – 00 and "Refrained" – 00.

The chairman of "The dissertation council" (scientific consultant):
the head of chair "Modeling of electromechanical and computer system",
"The honorary professor of "The SPbSU"", d.ph.-m.s., prof. *Egorov Nikolay Vasilyevich*.

The scientific supervisor: the prof. of chair "Information system" of "The SPbSU",
the member of "The American mathematical society",
d.ph.-m.s., prof. *Kvitko Alexander Nikolaevich*.

Applicant: the author of the unique cognitive modeling technology
for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.

Part VI. The concluding remarks of the chairman and the members of "The dissertation council" on dissertation

"The environment of automated training with properties of adaptation based on cognitive models" on the competition of scientific degree of the candidate technical sciences on spec. 05.13.01 – "The system analysis, control and information processing"

<u>Applicant:</u> the author of the unique cognitive modeling technology for the system, financial and complex analysis *Vetrov Anatoly Nikolaevich*.
